Dr. Alan Gregg
Director for Medical Sciences
Room 5500, 49 West 49th Street
New York 20, New York

Dear Dr. Gregg:

The Atomic Energy Commission considered at its meeting October 27 the report of the meeting of the Advisory Committee for Biology and Medicine at Hanford Operations Office, together with the report of staff action taken on the basis of these recommendations.

The Commission deeply appreciates the work which the Committee has been doing for it and particularly appreciated the way in which the prompt and careful analysis of the particle problem enabled avoidance of what might have been a very serious interference in production schedules, without jeopardizing health or lowering standards.

The following action was voted unanimously by the Commission: Be it resolved that the Atomic Energy Commission express its appreciation to the Advisory Committee for Biology and Medicine for their advice and aid in overcoming the numerous problems that arise in the fields of health and biology as related to atomic energy and in advancing the peaceful utilization of this new scientific field.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION
