FOLDER N/A

F. Swanberg, Jr.
Manager-Internal Dosimetry

MONTHLY ACTIVITIES REPORT
FEBRUARY, 1962

1. Clearance approvals for a paper titled "Ringold - An Environmental Study" were received. An abstract was sent to the Health Physics Society for their consideration.

2. Development of the IDO record-report systems continued.

3. The formal request for permission to pursue the planned program of clinical data on plutonium was not forwarded as intimated in the January report.

4. Amounts of I^{131} in milk continued to be small consequently the program of children's thyroid examinations was inactive.

5. Consideration was given to the development of a mobile thyroid counter facility of about the size to fit a large pick up truck. Such a device would permit a more appropriately oriented environmental surveillance program.
