TRITIUM REPORT - OCTOBER, 1963

The tritium dose for individuals for the period 12/28/62 to 5/17/63, was entered on the tritium file with the October, 1963 processing.

There are two blocks of entries for many persons on the October report which reflect employment under different job codes. Hopefully, these totals will be combined with the November processing.

DELETED record is grossly in error. The reason for the error is not known, though the inadvertent inclusion of data for a prior badge pull is most suspect. The correct totals for DELETED appear on the IBM listing.

An audit of the calendar year and all time dose is planned for the November processing.
