Dr. Spofford G. English
Assistant General Manager for
Research and Development
U. S. Atomic Energy Commission
Washington, D. C. 20545

Dear Spoff:

The attached correspondence is more or less self-explanatory, and you may have already heard about the possibility of using the Mason Facility for medical research and even eventual therapeutic purposes. Chuck Dunham is aware of the situation, of course, both informally and from a letter which I have written him. We are all very interested and excited about the prospects which might develop and in the possibility of broadening the base of overall research activities at Los Alamos in this manner.

The purpose of this letter is to request that you (or Chuck Dunham) make sure that appropriate levels in the Commission are not unaware of what is going on. I have, of course, kept the local AEC informed, and they will have to be closely involved with the actual administrative questions which arise in connection with "collaboration." Perhaps this time [illegible], the AEC will not have to put up the money.
