1.0 Introduction/Project Description

As the Tank Operations Contractor for U.S. Department of Energy operations at the Hanford site in Washington State, Washington River Protection Solutions (WRPS) is responsible for managing highly radioactive wastes stored in tanks at Hanford. WRPS tests air-purifying respirator (APR) and powered air-purifying respirator (PAPR) chemical cartridges commonly used at Hanford Tank Farms to determine the period of time that the cartridges would provide adequate performance for APRs and PAPRs used to protect workers when exposed to a mixture of Chemicals of Potential Concern (COPC) from any vapors exiting headspaces in the storage tanks. The Occupational Safety and Health Administration (OSHA) Standard promulgated in Title 29 of the Code of the Federal Regulations (CFR) 1910.134(d)(3)(iii)(b)(2) specifies that for protection against gases and vapors, employers shall implement a schedule for cartridges to ensure that change-outs occur before the end of service life.[1-4] The change schedule can be based on objective information or data that ensures cartridge change-outs occur before the end of their service life.[2-5] The primary function of the WRPS Cartridge Test Program is to obtain objective data to determine service lives for the APR and PAPR cartridges used at Hanford Tank Farms. WRPS contracted with Pacific Northwest National Laboratory to analyze the test data and offer an independent analysis and any recommendations.

Volume 1 of this report summarizes data analysis of APR and PAPR cartridge testing on vapors from the AP tank farm exhauster. Previous testing of APR cartridges was conducted on the AP exhauster in June 2016. However, an AP exhauster upgrade was completed in September 2016. Two different APR cartridges from SCOTT Safety (Monroe, North Carolina) were assessed for the new AP exhauster source, along with two different PAPR cartridges—one from MSA Safety Inc. (Pittsburgh, Pennsylvania) and another from 3M (Maplewood, Minnesota).

Volume 2 provides an introduction to the raw data, including analytical laboratory analysis results that supported the analysis and conclusions documented in Volume 1.

Appendix C

Raw Analytical Data

Appendix C

Raw Analytical Data

In previously published cartridge reports, raw data for all contaminants analyzed during testing were provided in Appendix C to the document. However, the extensive amount of data (over 1200 pages for this report) resulted in unwieldy document file sizes. To solve this problem, raw data are provided in a separate Volume 2. Appendix C of Volume 1 provides introductory information regarding the content of Volume 2, but the complete raw data set is provided only in this Volume 2.

C.1 Description

This appendix includes raw data of flow rate, temperature, pressure, and humidity, as well as analytical data for the Hanford AP tank farm exhauster. Calculations using these data are given in Appendix D.

Raw analytical data are included only in Volume 2. Washington River Protection Solutions (WRPS) converted the data into Excel data spreadsheets that were transmitted to Pacific Northwest National Laboratory. Comments on that conversion are provided below.

The analytical measurements listed in Results spreadsheet columns were transferred from entries labeled 'result' in the raw analytical .pdf files. Where a results entry was given as 'ND' in the .pdf, a '<' symbol was used. Where a detection limit (DL)/reporting limit (RL) was listed as 'n/a,' the result entry in the spreadsheet was set at the DL or RL.

The use of the RL or a DL varied among analytical laboratories. The term RL (equivalent to a limit of quantification) was used instead of a DL by ALS Environmental Salt Lake City, Columbia Basin Analytical Laboratory, and 222S–Wastren Hanford Laboratory (see Tables F.1 and F.2 in Appendix F for a complete correlation of which Chemicals of Potential Concern (COPC) used an RL or a DL). The WRPS laboratory provided a DL rather an RL. Neither RLs nor DLs were provided for tentatively identified compounds (TIC).

Chain of custody information is provided clearly in the raw analytical data .pdf files, including analyte name, sample numbers, and laboratory-assigned numbers. Chemical Abstract Service numbers were provided by the respective analytical laboratory.

The nomenclature of the sample identification (ID) is the same for every set of chemicals. It is generally composed of a survey number, tank farm ID, test location, sample line, and tube bundle ID. Descriptions of these nomenclatures follows

'BL' means blank measurements obtained from sorbent tubes that have not had any vapor stream passed through them. 'BA' with either 'IN' or 'EF' means measurements obtained for ambient air (fresh air versus tank vapor) running through the test system from the inlet (IN) or effluent (EF) locations before initiation of tank vapor testing.

'SD1' designations correspond to testing with the SCOTT 7422-SD1 respirator cartridge, 'SC1' designations correspond to testing with the SCOTT 7422-SC1 respirator cartridge, 'TL1' designations correspond to testing with the MSA OptiFilter TL respirator cartridge, and 'TL2' designations correspond to testing with the 3M FR-57 respirator cartridge. The unique survey number also is assigned, identifying the year and a five-digit ID for each of the cartridges tested. For the AP tank farm exhauster, the PAPR

survey IDs included 18-02350 for TL1 and 18-02351 for TL2. For the tank AP exhauster, the APR survey IDs included 18-02348 for SD1 and 18-02349 for SC1.

Position designations 'IN' with '1' and 'EF' with '1' correspond to the respirator cartridge inlet and outlet measurements, respectively, at 0- to 2-hour time intervals. Position designations '2' through '8' correspond to the subsequent 2-hour measurements for inlet (IN) and outlet (EF): '2' (2 to 4 hours), '3' (4 to 6 hours), '4' (6 to 8 hours), '5' (8 to 10 hours), '6' (10 to 12 hours), '7' (12 to 14 hours), and '8' (14 to 16 hours).

The sample IDs embed the information given above. For example, sample ID 18-02351-8-TL2-IN-1 corresponds to a particular cartridge survey (18-02351) identified as the 3M FR-57 cartridge with the (TL2), sample media line 8, influent (IN) sample bundle, and the first (0 to 2 hours) sample (1). The target flow rate passing through the respirator cartridge was 30 L/min for the APR tests, and 95 L/min for the PAPR tests. The target sampling flow rates through the sorption tubes ranged between 30 and 2000 mL/min for different chemicals that were being collected. WRPS provided these flow rates as Excel files according to Table C.1.

Table C.1. Filenames of Sample Media Volumes Provided by WRPS

Tank	Cartridge	Filename

AP Exhauster	SCOTT 7422-SD1	AP Exhauster SD-1 3_24_18 .xlsx
AP Exhauster	MSA TL (TL1)	AP Exhauster TL 3_23_18 .xlsx
AP Exhauster	3M FR-57 (TL2)	AP Exhauster 3M FR-57 3_24_18.xlsx

WRPS provided the temperature and humidity information in files listed in Table C.2. The information is shown in the Section C.3. Several terms used in the DRI files are described below.

- Pre' and 'Post' indicate the general time signature when the direct read instrument measurements were taken. 'Pre' refers to the beginning of the 2-hour sample duration, and 'Post' refers to the end of the 2-hour sample duration.
- 'Influent' and 'Effluent' indicate the location of the measurement within the test system. 'Influent' measurements are taken at the inlet of the system upstream of the respirator cartridge. 'Effluent' measurements are taken downstream of the respirator cartridge. The pressure, temperature, and humidity effluent sensors are located at the end of the test system near the vacuum pump, whereas the DRI measurements for ammonia and volatile organic compounds (VOC) are from a sampling location between the respirator cartridge and the effluent sorbent tube samples.
- The DRI measurements for ammonia and VOCs could not be taken while the test system sample pumps were operational. 'After Sample Taken' refers to the time signature for these direct read results (e.g., Sample A DRI measurements were taken immediately after the Sample A sorbent tubes were taken and replaced with Sample B sorbent tubes).
- Columns labeled "Mach. Base 1" and "Mach. Base 2" refer to the 'BASE' baseline samples for influent and effluent, respectively, to verify machine cleanliness prior to experimental measurements.

Table C.2. Files Containing Temperature, Pressure, Relative Humidity, and DRI Data

AP Exhauster	3M FR-57 (TL2)	Temp Pressure Humidity AP Exhaust_FR-57.xlsx

The raw analytical data for chemicals in each analyte category are summarized in Section C.4. Some analytes are measured using more than one method (primary and secondary). A crosswalk of COPC to analyte category, media, and analytical method for both primary and secondary methods is provided in Table C.3. In general, the primary method was used for cartridge performance analysis except in cases for which the secondary method provides improved quantitation for the specific COPC and its concentration range during a specific test.

Table C.3. Crosswalk of COPCs with Primary and Secondary Analyte Category, Media, and Analytical Method

COPC#	Analyte Name	Primary Analysis Method (Analyte Category | Media | Method)	Secondary Analysis Method (Analyte Category | Media | Method)

New	Dimethyl Mercury	Not Measured	

[a] A TIC designation indicates that a mass spectrometry "peak" not associated with calibrated compounds has been tentatively assigned to a compound based on an adequate match to the analytical methods reference library. Reference standards for the compound are not available to accurately quantify, assign an analytical DL, or definitively confirm the identity of the TIC. TICs are reported when the peak area is sufficiently large, estimated as ≥5 nanograms of TIC mass, and other analytical criteria are met. For the respirator cartridge testing, this mass of TIC represents an approximate concentration of <1.0 ppb, based on the average of all TICs in the COPC list. TIC compounds are measured through both the Carbotrap 300: EPA TO-17 and Carbotrap 150: EPA TO-17 modified methods. A few compounds are measured in the TIC analysis and another analytical technique. In these cases, the TIC analysis results were not retained because they are qualitative only and inferior to the other calibrated method.

[b] Furan, 2,5-dihydrofuran, and 2-methylfuran are quantified using the VOC method, as the original primary method (Furans) was determined to perform inadequately for these lower-boiling-point furan compounds.

C.2 Miscellaneous Notes

All analytical flags assigned by each analytical laboratory are provided in Appendix D. Sample lines occasionally experienced flow control issues, and these instances are documented in Appendix D with a quality flag of 'S*' associated with the impacted data point.

Methanol was measured in the powered air-purifying respirator test rig only. A thirteenth sample media line was added to the new rig so methanol could be measured using a dedicated sorption tube.

Three emails included below document corrections made to originally received data files as a result of reviews conducting before and during data analysis and reporting.

Date: Monday, September 17, 2018 11:01:39 AM
Attachments: AP Exhauster SC-1 3_23_18.xlsx
AP Exhauster SD-1 3_24_18.xlsx
AP Exhauster TL 3_23_18.xlsx
AP Exhauster 3M FR-57 3_24_18.xlsx

Tom,

1.) The headers have been changed to reflect the actual dates of the AP test and are attached.
2.) The sequence was changed for the AP test. The reason for this was that the IHT filling out the CoC's the day prior to testing swapped the order and to save us from having to redo the paperwork we just ran with the swap.
3.) The words on the field log are "combo" which is the SD-1 cartridge.
4.) For some reason, the IHT filling out the paperwork decided to write "MSA TO" for the cartridge when in reality it was the Scott SC-1. I have no question in my mind as to whether or not this log is correct… the APR and PAPR logs are different enough that I am certain this log was not used for the MSA TL testing. Conversely, the MSA cartridge log was filled in "Scott SC-1" but for the same reasoning, I am confident that the logs were filled out correctly for their respective tests. I think this was just a matter of confusion from the IHT's performing the recording as to what cartridge was in their machine since they hadn't seen either machine before.
5.) As for the other half of the analytical data for Nitrosamines… I just rechecked in the Laboratory Results folder I pull the data from and only the one Nitrosamine file is present. I will make some calls and get back to you on that one.

I have zipped all files down and will upload once I am done with this email. If the link does not work anymore I will ask you for another. Following that I will be finishing up with the temperature, pressure and humidity data.

Best,

-Zack

Cc: Bottenus, Courtney L <courtney.bottenus@pnnl.gov>
Subject: RE: AP Exhauster Data

Zack – sorry for the number of messages regarding AP… but completed an initial file check of what we received so far, and had a few red flags/questions for you.

Flowrate Files:

- Each of the flowrate files still have the BY-108 or BY-110 headers (top of the worksheets) , and

February (rather than March) dates for the testing. Please send us corrected flowrate files with the correct AP Exhauster and test dates identified at the top of the worksheets.

- Also noticed that the SD-1 and SC-1 flowrate file names indicate that the usual sequence of SD1 on Friday and SC1 on Saturday testing appears to have been changed for the AP Exhauster test. I assumed this was just a mistake in the file naming, but when I looked at the field logs, it appeared that in fact the SD-1 test was performed on Saturday-Sunday, and the SC-1 test was performed Friday-Saturday. Please confirm.

Field Logs

- In looking at the logs to confirm SD-1 and SC-1 test days, I noticed that the cartridge type field for the SD-1 log was either illegible or blank, but the lot # appeared to be consistent with the SD-1 cartridge lot noted on the BY test. So assumed it was correctly labeled on the file name, and confirms a 3/24 (Saturday) start of the test.
- For the SC-1 field log, I noticed that the cover page showed 3/23-24 (fri-sat) test... but the cover page noted both MSA T0 and SCOTT SC-1... so it added some confusion about whether the log was correct.

Analytical Files.

- We only received a single nitrosamines file (Nitrosamines 20180934.xls), and the data only covers the SD-1 and TL1 cartridges. It appears we are missing a second nitrosamine file that covers SC1 and 3M FR-57

And then as I noted in my earlier notes... the companion, official pdf analytical reports that accompany the excel files are needed, along with the CoC file (mainly to make sure we have them for those analytical reports (i.e., furans, VOA, SVOA) where the analytical report doesn't contain the CoC directly.

Courtney,

I have completed my review of the sample volume data. The SC-1 and FR-57 data are all valid with no corrections. Attached are the SD-1 and MSA TL excel spreadsheets with changes made where appropriate.

The only changes made are:

SD-1 → G1 Ethylamine corrected

MSA TL → E2 VOC/Hg/Furan all corrected

All other flags are valid with respect to the field logs.

I apologize for the delay and hope you have an excellent Thanksgiving!

-Zack

Subject: AP Exhauster Flow Volume Checks

Zack,
I've been looking through the flow worksheets for the AP Exhauster (2018 set) of cartridge data. I have included pictures with highlighted cells in the flow volumes. The highlights represent a cell value that is larger than +/- 10% of the average of all of the flow volumes for that line (ignoring any zero value cells). If you could, once again, provide a comment on each of these that would be very helpful. I also note that Methanol seems to be miss-spelled on a consistent basis (I am assuming these are all being entered into a template).

Tom,

After reviewing the email, I concur with your teams' assessment and agree with the corrective actions.

Best,

-Zack

Subject: FW: AP SD1

Zack,

We were trying to figure out a significant difference in service life estimate for the AP SD1 and saw a large drop in RH% at the 6th sample time. However, in further interrogation, it became abundantly clear from the pressure that this was actually the effluent side readings (see the low pressure readings for sample 6 (F). I looked at the log sheet and it looks like the true influent DRI readings show relatively normal readings here. Could you simply send us a confirmatory email reflecting what the true readings should be for the 6th sample (F) for SD1. We'll use that email to correct the SD1 table. Alternately, you can just send us a corrected SD1 table.

Thanks. Tom

Subject: RE: AP SD1

Hi Tom,

Thanks for pointing out this. If the RH really changed (dropped significantly in this case), it will definitely affect the adsorption of ammonia. Lower RH will lead to shorted breakthrough time for ammonia as we know. So I agree with your point. It looks like they might swap the RH-T-P data for column F and G in the Influent-Pre table. A post measurement from the previous sample is only several minutes away from a pre measurement for the current sample as you can see in those pairs connected by green arrows (we always observe this in the past). However, the two pairs connected with red arrows do not follow the trend until we swap the data in column G and H.

Anyway, it looks like something happened during the measurement of data F (hour 12) so the temperature of the chamber increase by about 10F and the relative humidity dropped by 40%.

The concentration variance could not explain why SureLife calculator gave a higher predicted value. I asked Scott to run the calculation again with the maximum inlet concentration instead of average concentration, the predicted service life is about 16.8h which is still longer than what we saw from experiment. So I think the sudden change in temperature, RH and temperature impact the performance of the cartridge.

Best regards,

Jian

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Symbols and Definitions

- * - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Symbols and Definitions

- * - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Comments

Workorder: 1808951

Amines-VOA Aliphatic VAA-1 is a panel of amines analyzed by modified methods OSHA 34, OSHA 36, and OSHA 40. The modifications to both the prep and analytical procedures allow Dimethylamine, Ethylamine, and Methylamine to be analyzed together in a single analytical run.

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Rand Potter, Project Manager, ALS Environmental

Symbols and Definitions

- * - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Comments

Workorder: 1808953

Amines-VOA Aliphatic VAA-1 is a panel of amines analyzed by modified methods OSHA 34, OSHA 36, and OSHA 40. The modifications to both the prep and analytical procedures allow Dimethylamine, Ethylamine, and Methylamine to be analyzed together in a single analytical run.

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Rand Potter, Project Manager, ALS Environmental

Symbols and Definitions

- * - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Rand Potter, Project Manager, ALS Environmental

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Rand Potter, Project Manager, ALS Environmental

Symbols and Definitions

- ✱ - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

NARRATIVE

FINAL REPORT ON MERCURY VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018

This final report presents the results of eighty mercury vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The mercury vapor tubes were logged into sample delivery group 20180918.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Mercury by OSHA ID-140	LA-325-109, Rev. 2-5	LA-325-109, Rev. 2-5

ANALYTICAL SUMMARY

The vapor tubes were tested for mercury, as specified on the chain of custody. Standard laboratory procedures for digestions and cold vapor atomic absorption for mercury were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control standards (LCS). For mercury, the results of 332 LCS determinations indicate a mean recovery of 92.63% with a standard deviation of 5.4%. Statistical process control limits for the LCS are 80-108.7%. The overall estimate of uncertainty is 10.8%, with coverage factor (k) = 2.

Background levels of mercury or interfering compounds can be present in the sorbent tube media used for collecting vapor samples. OSHA ID-140 recommends that the laboratory determine the average background for each lot of media and subtract it from the sample results prior to reporting. However, per agreement with the client, this background is being determined by the client using blank media submitted as blind samples to the laboratory. Any blank subtraction from the sample results will be performed by the client. The laboratory is using the same media for QC samples. These QC samples may not match the lot numbers of the samples being

submitted and the background for this QC sample media has not been determined. Over the past several years the results from preparation blanks, field blanks, and the vast majority of samples have been below the laboratory's method detection limit, which is an order of magnitude below the reporting limit. In general, the laboratory believes there is no need for background subtraction using the current sample media (Hydrar, SKC 226-17-1A).

Sample 18-02349-6-scl-ef-8 was found to have greater than reporting limit results in the glass wool portion and less than reporting limit results in the resin portion

Thirty-two of the eighty mercury results for this sample group were above the reporting limit of 0.05 µg/sample.

Attachment 1

RECEIPT PAPERWORK

222-S	**SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST**	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180918

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC/SC Initials: DLS Date: 3-26-18

If No, comment on communication and resolution:

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC(SC) Initials: DLS Date: 3-26-18

If No, comment on communication and resolution:

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC(SC) Initials: bhs Date: 3-26-18

If No, comment on communication and resolution:

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

Attachment 1

DATA SUMMARY REPORT

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC(SC) Initials: bhs Date: 3-26-18

If No, comment on communication and resolution:

WRPS Ship 600

Run 240

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

Attachment 1

DATA SUMMARY REPORT

DATA SUMMARY REPORT FOR SAMPLE GROUP 20180917

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1020 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC/SC Initials: BLS Date: 3-26-18

If No, comment on communication and resolution:

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC/SC Initials: BLS Date: 3-26-18

If No, comment on communication and resolution:

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC(SC) Initials: bhs Date: 3-26-18

If No, comment on communication and resolution:

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC(SC) Initials: bhs Date: 3-26-18

If No, comment on communication and resolution:

WRPS Ship 600

Run 240

NARRATIVE

**FINAL REPORT ON AMMONIA VAPOR TUBES
FOR CARTRIDGE EVALUATION
COLLECTED March 23-24, 2018**

This final report presents the results of eighty ammonia vapor tubes received at the 222-S Laboratory on March 26, 2018, in good condition and with adequate paperwork. The samples were logged into sample delivery group 20180917.

DISCLAIMERS

- The information contained in this report is intended only for the use of the addressee and should be considered confidential.
- This report shall not be reproduced, except in full, without written approval of the laboratory.
- The results shown in this report pertain only to the actual samples tested.
- These results conform to the requirements specified in the referenced methods/procedures and specifications provided verbally or electronically by the customer. Any deviations or modifications are discussed in the following narrative.
- This report only addresses laboratory activities related to the listed surveys. Requirements or anomalies concerning field sampling are not addressed in this report.

PROCEDURES

Method	Preparation Procedure	Analysis Procedure
Ammonia by OSHA ID-188	LA-533-117, Rev. 4-0	LA-503-157, Rev. 2-8

ANALYTICAL SUMMARY

The vapor tubes were tested for ammonia, as specified on the chain of custody. Standard laboratory procedures for ion chromatography were followed as well as the requirements in WHL-MP-1029, *WHL Industrial Hygiene Quality Assurance Project Plan for 222-S Laboratory* (QAPP). Program specific work authorization instructions have been provided for WRPS IH sample analysis through verbal and electronic communication with the customer point of contact, and are kept as a record by the laboratory. When applicable, any client communication specific to the samples in this report will be included herein. All quality control criteria in the QAPP were met.

The measurement uncertainty was estimated based on the historical behavior of laboratory control samples (LCS). The results of 373 LCS determinations indicate a mean recovery of 98% with a standard deviation of 3.3%. Statistical process control limits for the LCS are 83-112%. The overall estimate of uncertainty is 6.7%, with coverage factor (k) = 2.

Due to background levels of ammonium (or interfering compounds) that are typically present in the media used in the sorbent tubes for collecting the vapor samples, positive results are obtained for the preparation blank. Laboratories typically correct the LCS and all field samples for these background levels, when detected. However, per agreement with the customer, no blank subtraction was performed. The client-requested reporting limit is 10 µg per sample, which makes the analysis of additional blanks and subsequent blank subtraction unnecessary. It is the laboratory's opinion that including the media contribution, which is well below the client's

requested reporting limit, provides results that are more conservative than when blank subtractions are performed.

Forty-four out of the eighty ammonia results for sample group 20180917 were above the reporting limit of 10 µg per sample.

Attachment 1

DATA SUMMARY REPORT

DATA SUMMARY REPORT FOR SAMPLE GROUP 20180917

RECEIPT PAPERWORK

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1000 Group No.: 20180917

Sample Custodian: Don Sorenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC(SC) Initials: BLS Date: 3-26-18

If No, comment on communication and resolution:

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

ANALYTICAL REPORT

Workorder: **34-1808949**
Client Project ID: 20180932 032418
Purchase Order: 55502 Rel15
Project Manager: Rand Potter

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Rand Potter, Project Manager, ALS Environmental

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Symbols and Definitions

- * - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Symbols and Definitions

- * - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Symbols and Definitions

- * - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ● - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Testing Sector	Accreditation Body (Standard)	Certificate Number	Website
Environmental	PJLA (DoD ELAP)	L17-288	http://www.pjlabs.com

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Rand Potter, Project Manager, ALS Environmental

Symbols and Definitions

✱ - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
● - Sample and Matrix Duplicate less than 5 times the reporting limit
● - Result is above the calibration range
- The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Comments

Workorder: 1808941

Samples 1808941001-020 are associated with QC samples 593580, 593581, and 593582. Samples 1808941021-040 are associated with QC samples 593594, 593595, and 593596.

The referenced method has not been validated for 2,4-dimethylpyridine. Additionally, studies regarding media collection efficiency,sample storage stability, analyte retention capability, and/or analyte desorption efficiency have not been performed.

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Comments

Workorder: 1808957

Samples 1808957001-020 are associated with QC samples 593598, 593599, and 293600. Samples 1808957021-040 are associated with QC samples 593602, 593603, and 593604.

The referenced method has not been validated for 2,4-dimethylpyridine. Additionally, studies regarding media collection efficiency,sample storage stability, analyte retention capability, and/or analyte desorption efficiency have not been performed.

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Definitions

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.
LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.
ND = Not Detected, Testing result not detected above the LOD or LOQ.
NA = Not Applicable.
** No result could be reported, see sample comments for details.
< This testing result is less than the numerical value.
( ) This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

ALS Envrionmental certifies this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this report has been electronically authorized by the following laboratory representative:

Symbols and Definitions

- ✱ - Analyte above reporting limit or outside of control limits
- ▲ - Sample result is greater than 4 times the spike added
- ⬢ - Sample and Matrix Duplicate less than 5 times the reporting limit
- ● - Result is above the calibration range
- # - The Matrix Spike, Matrix Spike duplicate or Matrix Duplicate is reported for your information only. The sample matrix may be inappropriate for the method selected.

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Contract: 55503 R9

Subject: Nitrosamines Analysis Report, Group Number 20180933

Enclosed is the final report for group 20180933 number analyzed for Nitrosamines using NIOSH 2522-Modified. This group number 20180933 has been assigned a Columbia Basin Analytical Laboratories login order number of W803176. This report consists of a summary report of the samples, a single quality control report for the analysis batch, and a copy of the chain of custody.

General Set Comments

Columbia Basin Analytical Laboratories received 40 samples on 03/28/18 to be tested for Nitrosamines. The samples were analyzed in accordance with NIOSH 2522-Modified for N-Nitrosodimethylamine, N-Nitrosomethylethylamine, N-Nitrosodiethylamine, N-Nitrosodi-n-propylamine, N-Nitrosodi-n-butylamine, N-Nitrosopiperidine, N-Nitrosopyrrolidine,and N-Nitrosomorpholine. All results have been corrected for desorption efficiency and measurable levels in the blanks.

Recent changes to the extraction solvent mixture in combination with apparent variations in the sampling mediaresulted in unpredictable extraction efficiencies. These inconsistencies were observed by batch QC analysis. Ultimately samples were quantitatively eluted and the results presented herein should be considered quantitative. All data qualifiers have been maticulously applied according to our SOP.

Results

There were detectable nitrosamines concentrations at or above the reporting limit in the samples.

SampleName | Lab ID	Analyzed	Analyte	CAS Number	Results	RL	Units	Flags

Recovery Failures in the ICV, CCV, LCS, and MRL

There were no recovery failures in the CCV, ICV. There were recovery failures in the LCS, MRL.

RSD Failures in the LCS

There were RSD failures between the laboratory control samples.

Measurable Blank Values

There were no measurable analytes in the blank samples.

Calibration Curves

The calibration curves for Nitrosamines had an R-value that was 0.995 or better, over a range of 5.00 ng/mL to 1,000.00 ng/mL.

RJ LEE GROUP

General Lab Comments

The results provided in this report relate only to the items tested. Samples were received in acceptable conditions unless otherwise noted in the comments above. Samples have not been field blank corrected unless otherwise noted in the general set comments above. This test report shall not be reproduced, except in full, without written approval of Columbia Basin Analytical Laboratories.

I certify that this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this hard copy report has been authorized by the Laboratory Director or a designee as verified by the following signature.

05/14/18

Scientist III J Grissmerson

If you have any questions, please feel free to contact J Grissmerson at jgrissmerson@rjleegroup.com or at 509-545-4989.

RJ LEE GROUP

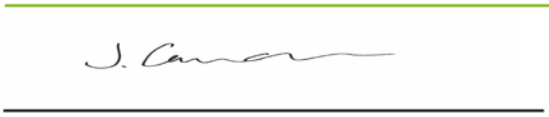
Report Qualifiers:

A = Target analyte media breakthrough suspect, see analytical report
B = Analyte detected in the associated blank
C = Poor agreement between initial and confirmatory analyses, result should be considered qualitative only
D = Analyte analyzed in a dilution
d = Desorption efficiency outside of acceptable limits
E = Report concentration was above the instrument calibration range
H = Holding times for preparation or analysis exceeded
J = Analyte detected below quantitation limits, concentration is estimated
L = Sample condition at receipt out of compliance with method
P = Library spectrum match, rsd >90% w RT match defined conditions
Q = Result out of method specific acceptance QC criteria
R = % Relative Standard Deviation of LCS outside of acceptable limits
S = Spike Recovery outside accepted recovery limits
L̄ = LCS Spike Recovery limits above recovery limits
L̲ = LCS Spike Recovery limits below recovery limits
M̄ = MRL Spike Recovery limits above recovery limits
M̲ = MRL Spike Recovery limits below recovery limits
U = Analyte analyzed for but not detected
X = Analyte not detected upon confirmatory analysis
Z = Not ELAP accredited analyte
** = Analyte detected upon confirmatory analysis only*
N/A = Not Applicable
ND = Not Detected



Scientist III J Grissmerson

These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which the results are used or interpreted. Unless notified in writing to return the samples covered by this report, RJ Lee Group will store the samples for a period of ninety (90) days before discarding. A shipping and handling fee will be assessed for the return of any samples. Unless otherwise noted, samples were received in an acceptable condition. This laboratory operates in accordance with ISO 17025 guidelines, and holds limited scopes of accreditation under ORELAP Lab Code 4061 AIHA-LAP, LLC Lab ID 178656 EPA ID WA01195 and WA DOE Lab ID C859. This report may not be used to claim product endorsement by any laboratory accrediting agency. The results contained in this report relate only to the items tested or to the sample(s) as received by the laboratory. Any reproduction of this document must be in full for the report to be valid. Subject: Nitrosamines Analysis Report, Group Number 20180934

Enclosed is the final report for group 20180934 number analyzed for Nitrosamines using NIOSH 2522-Modified. This group number 20180934 has been assigned a Columbia Basin Analytical Laboratories login order number of W803177. This report consists of a summary report of the samples, a single quality control report for the analysis batch, and a copy of the chain of custody.

General Set Comments

Columbia Basin Analytical Laboratories received 40 samples on 03/28/18 to be tested for Nitrosamines. The samples were analyzed in accordance with NIOSH 2522-Modified for N-Nitrosodimethylamine, N-Nitrosomethylethylamine, N-Nitrosodiethylamine, N-Nitrosodi-n-propylamine, N-Nitrosodi-n-butylamine, N-Nitrosopiperidine, N-Nitrosopyrrolidine,and N-Nitrosomorpholine. All results have been corrected for desorption efficiency and measurable levels in the blanks.

Results

There were detectable nitrosamines concentrations at or above the reporting limit in the samples.

Recovery Failures in the ICV, CCV, LCS, and MRL

There were no recovery failures in the CCV, ICV, LCS. There were recovery failures in the MRL.

RSD Failures in the LCS

There were no RSD failures between the laboratory control samples.

Measurable Blank Values

There were no measurable analytes in the blank samples.

Calibration Curves

The calibration curves for Nitrosamines had an R-value that was 0.995 or better, over a range of 5.00 ng/mL to 1,000.00 ng/mL.

RJ LEE GROUP

General Lab Comments

The results provided in this report relate only to the items tested. Samples were received in acceptable conditions unless otherwise noted in the comments above. Samples have not been field blank corrected unless otherwise noted in the general set comments above. This test report shall not be reproduced, except in full, without written approval of Columbia Basin Analytical Laboratories.

I certify that this analytical report is in compliance with the Hanford SOW, both technically and for completeness. Release of the data contained in this hard copy report has been authorized by the Laboratory Director or a designee as verified by the following signature.

05/14/18

Scientist III J Grissmerson

If you have any questions, please feel free to contact J Grissmerson at jgrissmerson@rjleegroup.com or at 509-545-4989.

RJ LEE GROUP

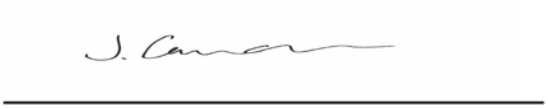
Report Qualifiers:

A = Target analyte media breakthrough suspect, see analytical report
B = Analyte detected in the associated blank
C = Poor agreement between initial and confirmatory analyses, result should be considered qualitative only
D = Analyte analyzed in a dilution
d = Desorption efficiency outside of acceptable limits
E = Report concentration was above the instrument calibration range
H = Holding times for preparation or analysis exceeded
J = Analyte detected below quantitation limits, concentration is estimated
L = Sample condition at receipt out of compliance with method
P = Library spectrum match, rsd >90% w RT match defined conditions
Q = Result out of method specific acceptance QC criteria
R = % Relative Standard Deviation of LCS outside of acceptable limits
S = Spike Recovery outside accepted recovery limits
L = LCS Spike Recovery limits above recovery limits
L = LCS Spike Recovery limits below recovery limits
M = MRL Spike Recovery limits above recovery limits
M = MRL Spike Recovery limits below recovery limits
U = Analyte analyzed for but not detected
X = Analyte not detected upon confirmatory analysis
Z = Not ELAP accredited analyte
** = Analyte detected upon confirmatory analysis only*
N/A = Not Applicable
ND = Not Detected



Scientist III J Grissmerson

These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which the results are used or interpreted. Unless notified in writing to return the samples covered by this report, RJ Lee Group will store the samples for a period of ninety (90) days before discarding. A shipping and handling fee will be assessed for the return of any samples. Unless otherwise noted, samples were received in an acceptable condition. This laboratory operates in accordance with ISO 17025 guidelines, and holds limited scopes of accreditation under ORELAP Lab Code 4061 AIHA-LAP, LLC Lab ID 178656 EPA ID WA01195 and WA DOE Lab ID C859. This report may not be used to claim product endorsement by any laboratory accrediting agency. The results contained in this report relate only to the items tested or to the sample(s) as received by the laboratory. Any reproduction of this document must be in full for the report to be valid. Quality control data is available upon request.

C.4.13 Chain of Custody Forms

222-S	SAMPLE RECEIPT AND CHAIN OF CUSTODY VERIFICATION CHECKLIST	ATS-LO-090-101 Rev DH-2

Date Samples Received: 3-26-18 Total Number of Samples: 1200 Group No.:

Sample Custodian: Don Sorgenson IH Technician: [signature] 3-26-18

Sample Custodian to Complete

Action	Yes	No	N/A	Comments
RSR provided?	○	○	⊘	
Verify GKI is complete	○	○	⊘	☐ In Project File
Received from an alpha facility?	○	⊘		☐ Contact PC for approval to release
Check that outer custody seal is intact, if present	○	○	⊘	
Record cooler temperature in centigrade, as appropriate	⊘	○	○	☐ Check if no cooler and/or no ice 4.8°
Samples are intact and in good condition	⊘	○	○	If No, provide comments below.
RSA/COC provided and complete containing the following information?				
• Client name and client sample number	⊘	○	○	
• Date and time of sampling	⊘	○	○	
• Sampling location or origin	⊘	○	○	
• Container type, size, and number	⊘	○	○	
• Preservatives *(if used)* noted on the COC/RSA and sample bottles	○	○	⊘	
• Analysis request is clear	⊘	○	○	
• Signature of persons relinquishing and receiving samples	⊘	○	○	
• Date and/or time of sample custody exchange	⊘	○	○	
Verify that sample numbers on containers match the COC and/or RSA	⊘	○	○	
Samples stored properly *(e.g., refrigeration)*	⊘	○	○	

Notify the PC immediately if any problems are noted. Any "No" checked boxes require PC resolution. For WRPS samples, the initials block below is completed by the responsible WRPS PC.

Samples acceptable for release? ⊘ Yes ○ No PC/SC Initials: DLS RAC Date: 3-26-18 3/26/18

If No, comment on communication and resolution:

WRPS Shrp 600
