

TABLE OF CONTENTS

I. NEUTRON SOURCES	
1.1 Alpha Neutron Sources	1
1.2 Photoneutron Sources	6
1.3 Neutron Sources Using Particle Accelerations	7
II. COLLISIONS OF NEUTRONS WITH NUCLEI	
2.1 General Types of Reactions	9
2.2 Neutron Cross Sections as a Function of Energy	9
2.3 Measurement of Total Cross Sections	11
2.4 The General Features of Collisions	13
2.5 Examples from Experiment	17
III. STABLE ISOTOPE CHART AND REACTIONS INVOLVING NEUTRONS	
3.1 The Segre Isotope Chart	23
3.2 Isotopic Weights and the Binding Energy of Neutrons	26
IV. MODELS OF NUCLEI AND NUCLEAR REACTIONS	
4.1 The Compound Nucleus	29
4.2 Neutron Resonances, Level Spacing	30
4.3 Two Nuclear Models	32
V. THE SCATTERING OF NEUTRONS	
5.1 The Breit-Wigner Formula	35
5.2 Some General Considerations on Neutron Scattering	36
5.3 Scattering by a Potential	37
5.4 The Scattering of Neutrons	43
VI. THE SLOWING DOWN OF NEUTRONS	
6.1 The Change of Direction and Energy upon Collision	50
6.2 Neutron Distribution from Point Source -- Experimental Methods	55
6.3 Distribution of Neutrons from Point Source -- Calculation of r_{av}^2	57
6.4 Distribution of Neutrons from Point Source -- Age Equation	62
VII. THE DISTRIBUTION OF SLOW NEUTRONS IN A MEDIUM	
7.1 The Differential Equation for Slow Neutrons	68
7.2 Boundary Conditions for the Slow Neutron Differential Equation	71
7.3 The Diffusion Length in Water and Graphite	73
7.4 The Albedo or the Reflectivity of Bounding Surfaces for Neutrons	76
VIII. NUCLEAR FISSION	
8.1 The Binding Energies of Nuclei	83
8.2 The Fission Process -- Energy Considerations	86
8.3 The Fission Process -- Resulting Particles	92
8.4 The Fission Process -- General Nature of Cross Sections	95
