March 9, 1945

On March 5, 1945 this person volunteered for a series of tests to determine the threshold erythema for beta rays. This person was given a series of four skin tests, 2½ cm in diameter on the left fore-arm. The doses ranged as follows, 140, 170, 200, 250 equivalent roentgens. For particulars see letter of J. E. Wirth to Medical Files dated 3/9/45.
