BERKELEY: DIVISION OF MEDICAL PHYSICS

February 8, 1951

GOFMAN

President Robert G. Sproul
Administration Building
Campus

Dear President Sproul:

Attached is an application to the U. S. Public Health Service for a renewal of the research grant we have held for this year, entitled "Fundamental Biochemical and Biophysical Factors in the Pathogenesis of Atherosclerosis."

The broad details of this project, as outlined in our request for last year, are essentially the same. The necessity for re-applying at this time for a renewal grant arises from the fact that the sum of money was somewhat larger than usual for U. S. Public Health Service grants, and there was an agreement that the whole project would be reviewed at the end of one year before the Public Health Service made the additional grants.

I believe that we have made considerable progress in the testing program and in the fundamental research during the past year and that some interesting and possibly definitive conclusions may become apparent from the presently proposed work.

This application represents no expansion of the current program and will require no further space, engineering facilities, or electrical load.

Doctor John Lawrence is of course thoroughly familiar with the entire nature of this project and has approved of its continuation.

Respectfully submitted,

John W. Gofman

John W. Gofman, M.D.
