Seattle 8, Washington

Dear Rex:

Recently I had the opportunity of reading your article in the proof form. Dr. Paul Polycove, who now works with us, suggested that in Table I perhaps two or three of the people you mention as normals are actually not in the normal range, because they have too much plasma iron in their blood and the half live is somewhat longer than he thinks the normal half life should be. In his opinion, three of the four subjects are perhaps not normals except maybe #2 which is in the normal range found at Harvard.

We would appreciate hearing your comments on this. However, do not feel, on the basis of this remark, that the editors necessarily feel that you should change this table.

With kind personal regards.

Sincerely yours,

Cornelius A. Tobias
