Captain Harry W. Need
U. S. Navy
Naval R.O.T.C. Unit
University of California

Dear Captain Need:

In accordance with the desire of the Executive Committee on Medical Physics and Biophysics of the Graduate School, I am undertaking to prepare a course in Radiation Measurements to be given in the second summer session by the University Extension Division for 20 naval officers who will come here to study radiation safety. The text book for this course is Serge A. Korff: "Electron and Nuclear Counters". Because the book only covers certain aspects of the course, the students will receive in addition some mimeographed sheets and graphs.

The students will also need a log-log duplex or a polyphase duplex slide rule (at least 10" long).

I trust this information reaches you in time to provide the students with these items by the beginning of the second summer session.

Sincerely yours,

Cornelius A. Tobias
