717858

6/10/80

Joint Naval Medical / LLC experiments

Maximum radiation dose calculated for the 30 minute ^{13}N-exposure is 250 mrem. Each subject will be exposed twice during a one week period which would increase the total maximum dose possible to 500 mrem to the lung. Actual expected dose will be lower.

Paul Meyer

P.S. An operating safety procedure (OSP) is being worked out for the planned experiments.

(H.S.C. of NRRI has approved the plans.)
