

FINAL

The first pile was disassembled early in 1943 and rebuilt with certain refinements and modifications near the present site of the Argonne National Laboratory. It was renamed Chicago Pile No. 2 (CP-2).

Unveiling the plaque on the West Stands of Stagg Field on the fifth anniversary, December 2, 1947. Left to right are AEC Commissioners William W. Waymack and Robert F. Bacher, Farrington Daniels, Walter H. Zinn, Enrico Fermi, and R. M. Hutchins, Chancellor of the University of Chicago. The West Stands were demolished in 1957, but the plaque remains.

The first heavy water moderated reactor (CP-3) was built near CP-2 at Argonne. In 1956 the uranium, graphite, and heavy water from the two reactors were removed and the remaining shells buried beneath this marker.
