

basis element 96 is named after the Curie's in a manner analogous to the naming of gadolinium, in which the chemist Gadolin was honored.

It is a pleasure to acknowledge the help and cooperation of Dr. J. G. Hamilton and his group who rebuilt the Berkeley 60-inch cyclotron in order to make much of this work possible and who performed the bombardments. The cooperation of the groups at the Clinton Laboratories and the Hanford Engineer Works in making the neutron irradiations is also gratefully acknowledged.

This paper is based on work performed under Contract No. W-7405-eng-48 with the Atomic Energy Commission in connection with the Radiation Laboratory, University of California, and under Contract No. W-7401-eng-37 with the Manhattan Engineering District in connection with the Metallurgical Laboratory, University of Chicago.
