

ACKNOWLEDGMENTS

We wish to acknowledge that the measurements of radioactivity in nearly all of the experiments reported here were made by Albert Ghiorso. The participation of Dr. Gary Higgins in the early experimental work, particularly in connection with ion exchange columns, is gratefully acknowledged. We are indebted to Docia McKennon, Margaret Nervik, Stephen Kahn, and Therese Pionteki for their help in the experimental work. We have also been helped by numerous discussions with Dr. B. B. Cunningham and Dr. I. Perlman throughout the course of this work.

The list of other persons and groups who have contributed either directly or indirectly to this work would be too extensive to include here but we hope all of those not mentioned here have been recognized in other reports concerning the production of the new elements and related isotopes.

This work was performed under the auspices of the U. S. Atomic Energy Commission.
