

## ACKNOWLEDGEMENTS

Many of the interviews conducted as part of our case study investigations were completed by individuals other than the authors. These included: Mary Mullins (ORNL), Anthony Schaffhauser (Tulane University), and Bob Wilson (University of Tennessee). Their ability to go beyond simple data collection to offer valuable interpretations is greatly appreciated.

The enthusiasm and discourse provided by the OBCS technology transfer "team" is also greatly appreciated, including Fred Abel (DOE), Jerome LaMontagne (Brookhaven National Laboratory), Barbara Farhar (Solar Energy Research Institute), and Rick Weijo (Pacific Northwest Laboratories). Valuable comments on previous drafts of this report were provided by Mike MacDonald (ORNL), Marty Schweitzer (ORNL), and Rick Weijo (PNL). The individual case studies were reviewed by a variety of people, too numerous to mention, but whose names are cited as information sources in the document.

Last, but not least, Pat Britt was responsible for the monumental word processing effort. The assistance of all these people is greatly appreciated.
