Primer on Molecular Genetics

Revised and expanded by Denise Casey (HGMIS) from the primer contributed by Charles Cantor and Sylvia Spengler (Lawrence Berkeley Laboratory) and published in the *Human Genome 1989-90 Program Report*.

Introduction	3
DNA	4
Genes	5
Chromosomes	6
 Mapping and Sequencing the Human Genome	8
Mapping Strategies	9
Genetic Linkage Maps	9
Physical Maps	11
Low-Resolution Physical Mapping	12
Chromosomal map	12
cDNA map	12
High-Resolution Physical Mapping	12
Macrorestriction maps: Top-down mapping	14
Contig maps: Bottom-up mapping	14
Sequencing Technologies	16
Current Sequencing Technologies	21
Sequencing Technologies Under Development	22
Partial Sequencing to Facilitate Mapping, Gene Identification	22
End Games: Completing Maps and Sequences; Finding Specific Genes	23
 Model Organism Research	25
 Informatics: Data Collection and Interpretation	25
Collecting and Storing Data	25
Interpreting Data	26
Mapping Databases	27
Sequence Databases	27
Nucleic Acids (DNA and RNA)	27
Proteins	28
 Impact of the Human Genome Project	28
