

Fig. 6. The momentum spectra of μ 's from anomalous muon events found by the PLUTO experimenters⁴¹ using the DORIS e^+e^- storage ring.

This conclusion was published, Feldman *et al.*⁴⁰, in a paper entitled "Inclusive Anomalous Muon Production in e^+e^- Annihilation".

The most welcomed confirmation, because it came from an experiment at the DORIS e^+e^- storage ring, was from the PLUTO experiment. In 1977 the PLUTO Collaboration, Burmester *et al.*⁴¹, published "Anomalous Muon Production in e^+e^- Annihilation as
