

Introduction

The image shows a city skyline with various buildings and an American flag. The word 'Introduction' is written in large, bold, yellow letters across the top. Below the skyline is a dark blue navigation bar with three white buttons: 'HOME', '7th Diesel Engine Emissions Reduction Workshop', and 'HELP'.

7th Diesel Engine Emissions Reduction Workshop

HELP

Since its inception, the Diesel Engine Emission Reduction (DEER) series of Workshops has served as a forum for the diesel engine manufacturers and their suppliers, the commercial, government and military user communities, state and federal government regulators and R&D supporters, National Laboratories, Academia, the health effects experts and the environmentally concerned public sector organizations involved in some aspect of diesel engine emissions. Our objective is to improve diesel emissions reduction, recognizing the considerable

progress that has been achieved and hearing about further improvements in the R&D stage. These Workshops are a mechanism to enhance cooperation between agencies supporting development of diesel emission reduction technology. They provide many opportunities for networking among the multi-disciplined participants. We are also trying to establish a meaningful dialog with the environmental community wherein we hear their concerns and we tell them of the reproducible scientific progress in emission reduction.
