

## **A REVIEW OF REFINERY DIESEL DESULFURIZATION TECHNOLOGIES**

**Michael Leister  
MarathonAshland**

This presentation will review each of the technologies most likely to be used by refineries to desulfurize highway diesel fuel to meet EPA's 2006 requirement for 15 ppm maximum sulfur content. The advantages and disadvantages of each approach will be examined, and refinery configurational constraints will be discussed. Several emerging technologies will also be reviewed.
