Speeding access to science information from DOE and beyond

OSTI is the DOE office responsible for collecting, preserving, and disseminating DOE-sponsored research and development (R&D) results that are the outcomes of R&D projects or other funded activities at DOE labs and facilities nationwide and from grantees at universities and other institutions. The information is typically in the form of technical documents, conference papers, articles, multimedia, and software, collectively referred to as scientific and technical information (STI). While STI management is called out in a DOE directive (DOE O 241.1B) with requirements for contracting officers and others, we rely on a collaborative working relationship with STI managers at each DOE field office and national laboratory to ensure cohesive processes for the widely distributed program.

OSTI – Extending the reach and impact of DOE research results; bringing the world's research to DOE.

This corporate management of DOE R&D information has been carried out by OSTI since the 1940s and is called out in various legislation, most recently the Energy Policy Act of 2005:

> *"The Secretary, through the Office of Scientific and Technical Information, shall maintain within the Department publicly available collections of scientific and technical information resulting from research, development, demonstration, and commercial applications activities supported by the Department."*

Today, OSTI uses innovative search technology to make DOE STI freely and easily accessible, offering ever-expanding sources of R&D information to DOE program managers and researchers, the academic community, and the science-attentive public. Information resources with basic and advanced search capabilities, including semantic search, customized alerts and results displays, in-document searching and downloadable search results, are available to provide convenient access to DOE STI.

A key resource for DOE program managers, contracting officers, and others involved in R&D-related work is SciTech Connect, which provides access to over 2.5 million research citations from 1943 forward, with full text of DOE STI available comprehensively since 1990 and selectively for earlier years. Other collections developed and maintained by OSTI include: DOE-affiliated scholarly articles in DOE PAGES[Beta], DOE scientific research data and non-text information in DOE Data Explorer; multimedia videos highlighting DOE's scientific research in ScienceCinema; patents resulting from DOE-funded work in the DOepatents database; and remarkable advances in science at DOE R&D Accomplishments. These information resources can be accessed at www.osti.gov.

Once DOE R&D results are incorporated into our DOE collections, they are also made available via the National Library of Energy[Beta] (science information and more from across DOE), Science.gov (U.S. science information from 15 federal agencies), and WorldWideScience.org (global science information from more than 70 nations), all of which are managed by OSTI. Through these efforts, OSTI is sharing the results of billions of dollars worth of government-sponsored scientific research.
