

February 13, 1960

Memo to: Dr. O. Neal Miller

From: Roy H. Turner, M.D.

Dear Neal:

How would this schedule suit you for our lipid work.

Feb. 24 - Turner, "Differences in Composition of the Ultracentrifugal Fraction of Minimum Density Between Normal Young Men and Woman and Patients."

March 2- McCracken, "A Method of Assigning a Quantitative Score to Family Histories Which may Represent the Family Tendency to Atherosclerosis."

March 9- Watanabe, "Experience with Electrophoresis of Samples of Ultracentrifugal Fraction of Minimum Density in Blocks of Starch Paste."

March 16-Turner, "Some Hypotheses Concerning the Relationship of Serum Lipids to Pathogenesis of Atherosclerosis."

If there is a scarcity of essays, an additional date or two could easily be used, but is not sought for.

R. H. T.
