this description
on it*

Dear Dr. Grulee:

Enclosed with this letter is a proposal for the Faculty Committee on Research. Also included are copies of DASA-1844 to illustrate further the experimental design and scope of this project.

This proposal was submitted early in 1966 and was returned to me for consideration of several points per your letter of May 6, 1966. I think the present revision includes adequate clarification of the points in question.

Rather than restating them in this letter, I would prefer meeting with the Committee in person, since I think such a review of the proposal would be most valuable. Therefore, if the Committee feels it is warranted, please contact me regarding such a meeting.

Sincerely yours,

Ben I. Friedman
