EXPOSURE TO RADIOISOTOPES

In response to a request from LCol Paul Morton, I interviewed members of the Division who would be likely to have knowledge of any experiments in the laboratory during the 1950-1970s time period that would have involved human subjects having been injected or having ingested radioisotopes. All three individuals indicated that they had no knowledge or recollection of any such experiments. The individuals interviewed were:

Dr Henning von Gierke (Director Emeritus, AL/CFB), member of the laboratory since 1947. Interviewed on 24 Jan 1994.

→ Also had some knowledge of xenon work

Dr Charles Nixon (AL/CFBA), member of the laboratory since 1954. Interviewed on 18 Jan 1994.

Mr John Frazier (AL/CFBS), member of the laboratory since 1956. Interviewed on 20 Jan 1994. (Note John did have

very recollective of Bunting, Xenon work by Cpt Dowell

SUB: Question for old hands

spe with CB and ^{Chas. Bates} Christianson. Both indicated that to the best of their knowledge, no such experimentation was conducted in HE Div. Furthermore, expressed such activity outside the scope of Div mission of "Man-machine integration" R&D.

Cheers
