Dear Dr. Sawka: *Milbe*

The Naval Blood Research Laboratory at Boston University School of Medicine is pleased to collaborate with the U.S. Army Research Institute of Environmental Medicine on the study entitled "The Role of Thermal Factors for Metabolic Adaptations to Physical Training".

Our laboratory will measure the red cell volume of healthy volunteers with ^{51}Cr and ^{125}I albumin on four occasions over a four-month period. We will obtain approval to do this study from the Institutional Review Board for Human Research at Boston University Medical Center.

A copy of Boston University Medical Center's general radioisotope license is attached.

Sincerely yours,

Bob

C. ROBERT VALERI, M.D.
