WASTE MANAGEMENT STUDY

The Chairman noted item 6 in your Information Report 74-21 and expressed concern about the Weldon Springs and other sites that AEC may already have turned over to other uses that are still contaminated. She directed that a consideration of all contaminated sites, including those already turned over to other uses and others for which we are not now responsible, be included in our waste management review. The question is what are AEC's legal responsibilities, what should we do from a public relations viewpoint, what is it feasible for us to do, what are the budgetary implications, etc.?

She would like a separate review of the situation at Eniwetok. She understands that DOD has the responsibility for cleaning up Eniwetok under AEC supervision. She would like a memorandum from DMA setting out the current status of the Eniwetok clean up operation, the respective responsibilities of DOD and AEC, and projected actions thereon. Please have this memorandum to the Chairman by September 28, 1973. I passed this requirement to Frank Camm by telephone today.
