Los Alamos, New Mexico

Dear Sirs,

Please send me up to date information on your pion beam installation. Are you receiving any patients for therapy, and if so, what type? Is it thought that this beam will reduce the small bowel, bladder, and rectal damage that is often seen following radiation of cervical carcinomas?

Do you think that this type of radiation could be applied to colon, gastric, biliary tract or pancreatic malignancies?

I have a patient with metastatic adenocarcinoma of the cecum, with omental, mesenteric and hepatic metastases who is becoming jaundiced, but has recently responded to 5-fluoracil. Would you have anything to offer in such a case at this time?

Thank You,

Edward Greer
