TO: PAC Biology & Medicine Subcommittee

gpc
We need to institute a working group to help expedite experiments. I am writing to ask for your concurrence.

We are still getting of the starting block, but the linoleum floor is now in and the painting finished in the experimental area, so I expect the first decent experiments with animals and neon ($\sim 10^9$ per pulse) will start 15 September. Experiments need 2 weeks lead time, and the dosimetry group need time for more debugging. The present plan is to constitute a coordinating committee, as per the enclosed "by laws." Dr. John Lyman will serve as chairman and Mr. Robert Springsteen will be executive secretary. His duties include calling experimenters, arranging animal and experiment facilities, and sending out announcements. He will be our direct communicator between BEVALAC and all users.
