LASL PROPOSAL ENTITLED "DIAGNOSTIC IMAGE INTEGRATION FOR TUMOR LOCALIZATION"

The proposed studies concern a cooperative effort between LASL and Vanderbilt University to increase the precision of tumor localization. Data on patients will be obtained at Vanderbilt with various techniques (transmission and emission scanning, ultrasound imaging). LASL's effort will consist of developing integrated image processing.

Approval for forwarding the proposal to NIH is recommended. It may be desirable to inform the ERDA division that has the responsibility for this particular LASL group of this action.

C. W. Edington  
 Associate Director for Research  
 and Development Programs
