7 March 1946.

Subject: Meeting of Manhattan Project Technical Advisory Committee
on Isotopes.

MEMORANDUM to Lt. Col. H. L. Friedell.

1. A "Manhattan Project Technical Advisory Committee on Isotopes" has been formed of members from major laboratories of the District concerned with the production and uses of non-fissionable isotopes. The general functions of the committee will be to afford:

a. Exchange, between the chief users and producers of isotopes (separated and radioactive) within the project, of information on isotope requirements, production, distribution, measurement, and uses.

b. Expert technical advice to the District on the matters referred to in "a".

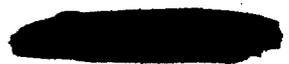

2. Because of the great interest of medical groups in isotope applications, it has been suggested that you be urged to sit in on the first meeting of the committee which is to be held here 20 March afternoon and 21 March morning, probably at Clinton Laboratories. It is further suggested that you would be in a position to advise on matters pertaining to the Rochester Area, from which no laboratory representation has been planned. Since the Advisory Committee is advisory to the District Office, those attending committee meetings from the District Office are not considered voting members.

3. A proposed agenda for the meeting is inclosed. Any suggestions you have would be appreciated.

1 Incl:
Cy. of Agenda.

PAUL C. AEBERSOLD.
