Dear Dr. Bassett:

I sure hope you aren't freezing when you get this. The weather is so lovely here and the grass is so green (and we don't even have to water it for five hours), but then California has some good points too even if the temperature does go up to 110° at noon and down to 32° at night.

I submitted the report to the front office yesterday for the declassification process and told Jane that it should be cleared by the middle of next month. She stated that it should be by then. Dr. Waterhouse went over it again with me and we put the legends on the tables, etc. I believe it is correct as it stands now.

Albert Frenkel paid us a visit - he is a bridegroom of one week and looks very happy about it all. Dr. Bale is on a conference this week and Dr. Hursh is very busy with new work. I told them both you sent your regards which they return with this note. I am going on my vacation next week (Hurray!).

Much luck in your new venture our west and please let us hear from you now and then. If I can be of any assistance at any time (and I know that goes for Dr Bale also), please do not hesitate to write.

Sincerely yours,

Marianne Maurer
