Washington, D. C.

Your reference: File 5.11

Dear Mr. Rodden:

Under separate cover we are returning a portion of beryllium metal samples No. 2700 and 2868 requested in your letter of February 8.

The portions of the same samples that you sent have been received but we have not yet found the time to make additional analyses. Since receiving your letter I have reviewed the results obtained here but have found nothing that I could question. Although the man who did the work has since left the project and is not available for discussion, he was considered one of the most reliable employees in the group. This gave me considerable confidence in his values.

We shall attempt to analyze the new portions within the next month. Upon completion of the work I shall forward the results to you.

Very truly yours,

C. F. Metz
