MEMORANDUM:

To: Commander F.I. Winant, CTG 7.6
From: Darol Froman
Subj: Allowable Radiation for Drone Tank Controlled Helicopter.

as

We suggest that the drone tank controlled helicopter not approach the crater closer than the position marked on the ground by Dr. Bowman.

The radiation level at this position should be quite low. However, we should like to put a limit of 1 roentgen per hour on the dosage. If the radiation level exceeds this level the helicopter should back off from the position marked by Dr. Bowman.

Darol Froman
