Dr. L. V. Jones

James Conway, Assistant Superintendent of Miscellaneous Products Area, a representative from Production and a representative from the Savannah River Operations Office will visit Mound on Tuesday, December 4, 1962, to observe the surveillance operations in SW-2A and discuss surveillance activities.

The Commission representative will be at Mound primarily to discuss the feasibility of supplying tank gas of a much higher concentration for the helium sales program which could result in considerable savings. Details on this subject could not be discussed.

Conway indicated considerable interest in non-destructive testing directed, I presume, toward the twin-bath calorimeter used at Mound. He stated that SRP may want to build a similar unit.

Because of the short supply of tanks at Mound, ten empty containers having calibrated volumes will be shipped from the Savannah River Plant on a scheduled truck arriving at Mound on November 20. Approximately fifteen tanks of gas from surveillance operations will be shipped on the return trip. A letter containing analysis and container information and shipping details will precede the shipment from Mound.
