Subject Special Study - Plutonium Urinalysis

KR Heid
File
LB

Personnel of the U.S. Testing Company and of the Personnel Dosimetry Section of the Occupational & Environmental Safety Department plan to study techniques to improve the accuracy of the current method of plutonium urinalysis. It is planned to take aliquots for study from the urine samples submitted by RL contractor personnel who have furnished such samples as part of the routine plant surveillance program. No separate or special samples will be obtained.

If this study requires further consideration by the Committee or additional details are desired, please advise me. I plan to start this study about October 1, 1978, unless you indicate otherwise.
