Dr. Irwin Arias
 Department of Medicine
 Albert Einstein College of Medicine
 1300 Morris Park Avenue
 New York, N. Y. 10461

Dear Dr. Arias:

During their meeting on April 6, 1972 the campus Committee on Human Experimentation suggested you as a possible reviewer of a protocol for use of human subjects from Dr. Michael Thaler titled, "Uptake, Transport and Excretion of 131 I Rose Bengal in Neonatal Obstructive Jaundice." This Committee is charged with the review of all protocols involving human subjects under the DHEW guidelines issued December, 1971.

The Committee would appreciate any additional comments you can offer in addition to the five questions asked on the yellow review form. These comments will be carefully considered by the Committee in their review of this project.

If you find that you will be unable to review this project, please return the materials as quickly as possible. The Committee will appreciate any consideration you are able to give.

Sincerely,

Ieslie L. Bennett, M.D.
 Chairman
 Committee on Human Experimentation
