Re: Grant AF-AFOSR-12-63

Dear Sirs:

I am submitting enclosed two copies of an interim technical report on work accomplished to date on the project entitled

**Erythropoiesis and Adrenocortical
Function in Man at High Altitude**

which was supported in part by a grant received from the Air Force Office of Scientific Research.

Copies of this report are being submitted simultaneously to the three agencies that issued supporting grants for this work: the National Science Foundation, the Air Force Office of Scientific Research, and the National Aeronautics and Space Administration. In recognition of support from the Atomic Energy Commission received through Donner Laboratory, the report will be printed as part of the Semi Annual Report- Biology and Medicine, Lawrence Radiation Laboratory, University of California, Berkeley, 1963.

This report is not intended for publication, and I request that it not be given wide distribution. The highly tentative observations and conclusions expressed in the report are based on incomplete analysis of data and samples collected in the field and are therefore subject to later revision. Upon completion of the laboratory work a final technical report and/or reprints of publications will be submitted in accordance with our grant agreement.

Correspondence related to this report or to technical details of the project should be sent to the address given below.

Sincerely yours,

William E. Siri
