Professor Hardin Jones  
1109 Donner Lab  
Campus

Hardin, -

Aside from my dislike for ingestion of C<sup>14</sup> in any form I have two questions:

1. Isn't it feasible to obtain adequate quantities of C<sup>13</sup> for such experiments?
2. What would happen if one of these women came up with leukemia 5-10 years from now and took her case to court? It seems to me that she would win her case handily. I believe it would serve the committee's (as well as the University's) best interests to get an opinion from the University's legal staff before approving this request.
