IN RE:

Gentlemen:

About three weeks ago Dr. Lauriston S. Taylor phoned me about the report of the Review Committee for the Radiological Physics Division, as a result of its meeting at the Laboratory, March 29-30. He was most anxious that some of the comments be restricted in circulation. I suggested that he prepare a report that could be sent to the Policy Advisory Board, to the Laboratory management, and to the Division Director, and that any additional comments could be sent to President Beadle in a separate letter. In regard to the latter, I informed him that the comments would be restricted to the four of us.

It is apparent that Dr. Taylor chose to present two separate reports, copies of which are enclosed, rather than a single report and a supplemental letter. The two reports for the most part are identical. The restricted version contains some additional statements of a personal nature. I would suggest that before any further distribution is given to either report we discuss the matter.

Sincerely,

Warren C. Johnson
