AIR MAIL

Dear Stan:

Some jokers from Washington are expected to invade the laboratory 17 August and I'm expected to discuss with them the significance of counts in the urine re the Marshallese. Any recent thoughts on this subject? Of course, if you'd just happen to be here along about then you could take over.

Another item I'd like to bring up is the possibility of my taking my next annual two weeks training duty at MRDL. The AEG group in Los Angeles recently sent around a circular proposing a radiobiology conference in Southern California in October or possibly January. In either case, if I can get to the conference, I could probably be authorized to stay another two weeks in San Francisco. I'd particularly like to get up-dated on your Sr effects studies. We could undoubtedly set up some experiments that would keep me busy for two weeks and be of interest to us both. I thought it'd be well to sound you out before asking Captain Behnke.

My friend Al Weinstein brought back a glowing report of the goings-on at MRDL. He may apply for a job there - that'd be a switch, eh?

Incidentally, Gene has seen the page proofs for the 4.1 report, and it's actually being printed! It may be out by the end of this month.

Regards to the gang,
