FOLDER DHSC 81-8

729543

From E. B. Harkins, Vice Chairperson, HSC *EBH*

Subject DHSC 78-2 Translocation of Yellowcake from the Human Respiratory Tract Rev. 1 -- Proposed Program for FY 1980

The modifications proposed to the above referenced project will, in my opinion, require review by the original DHSC team. Two aspects of the revisions appear particularly important: (1) apparently some in vivo measurements involving travel to Richland will now be included in Phase I (see item 22 of the proposal to NRC), and (2) the need to have subjects in Phase II transported to Richland within 24 hours of exposure would appear to add a significant degree of pressure on the subject's decision to volunteer or not.

Since there is no detail in the proposal on how you propose to handle the protection of the subjects involved in the project, I would ask that you complete a Supplemental Memo addressing these issues relative to both Phases I and II. Upon receipt of the Supplemental Memo and appropriate draft consent forms, I will distribute the proposal and other materials to the original review group.
