[REDACTED]

Dear [REDACTED]

This is in response to your letter of June 4 concerning possible help for your sister-in-law.

We regret that we can respond in only a very general way since a determination about the possibility of using radiation would necessarily have to be made by the private physician in consultation with specialists or institutions which are able to offer radiation therapy. The possibility of using radiation therapy alone or in conjunction with surgery depends on the type and location of malignancies. We feel certain the physician or surgeon would be aware of any possibility concerning radiation therapy.

You referred in your letter to a friend who was successfully treated a number of years ago for a thyroid condition. That type of treatment has been one of the more successful ones to grow out of the use of radioisotopes in the medical field. We are enclosing a booklet which discusses the thyroid work and other activities dealing with medical uses of radioisotopes.

Again, we regret we could not be of specific help.

Sincerely,

708 11

Atomic Energy Commission
Oak Ridge, Tennessee

Dear Sir:

This address was given to me by a friend who had a malignant tumor of the thyroid. He was informed that his case was non-operable. A Philadelphia doctor suggested he contact the Atomic Energy Commission. He purchased a capsule at its cost of fifty dollars (\$50⁰⁰) which he took. This was five years ago. The capsule cured the malignancy and he has been living a normal life today.

I have a sister-in-law who had brain surgery ten days ago. It too is a malignant tumor. I am very much interested in helping her. Will you please send me any information which could help her. If you need more information please let me know and

I shall try to provide you.
Thank you kindly.

Very truly yours,
~~XXXXXXXXXX~~
