Dr. L. Don Loet
Harvard University
Seismograph Station
Geological Museum
Cambridge 38, Mass.

Dear Dr. Loet:

Dr. Bainbridge has shown me your letter to him of September 7 in which you suggest the desirability of publishing some of the results of the July 16 shot which are of seismographic interest. I quite concur in the appropriateness of this and suggest the following procedure, which is similar to what has been done in other cases.

I would suggest that you prepare the article in the form you wish, even mentioning, if you desire, that the data was obtained in connection with the July 16th Alamogordo shot. I would, of course, omit all revealing data such as absolute distances, amplitudes, etc. Then, if you will send the article here, we will forward it to Washington recommending that it be released. It is my belief that this will then go through with no trouble.

Very truly yours,

H. E. Bradbury
Acting Director
