Environmental Regulatory Update

This report contains a bi-monthly update of environmental regulatory activity that is of interest to the Department of Energy. It is provided to DOE operations and contractor staff to assist and support environmental management programs by tracking regulatory developments. Any proposed regulation that raises significant issues for any DOE operation should be reported to the Office of Environmental Guidance (EH-23) as soon as possible so that the Department can make its concerns known to the appropriate regulatory agency. Items of particular interest to EH-23 are indicated by a shading of the RU#.

Any questions or comments about any aspects of the Update Table should be directed to Lois Thompson, Air, Water, and Radiation Protection Division, Office of Environmental Guidance, U.S. Department of Energy (EH-23), 202-586-9581.

ABSTRACT

The Environmental Regulatory Update Table provides information on regulatory initiatives of interest to DOE operations and contractor staff with environmental management responsibilities. The table is updated bi-monthly with information from the Federal Register and other sources, including direct contact with regulatory agencies. Each table entry provides a chronological record of the rulemaking process for that initiative with an abstract and a projection of further action.

*RU numbers are identifiers that are assigned to each regulatory initiative for tracking purposes. The first three digits are coded to the statute, and the last three digits are specific to individual initiatives. The update table is first organized by statutes as shown above and then by RU numbers arranged sequentially. An index is provided at the end of the table to relate CFR citations to RU numbers.

Regulatory Highlights - March/April, 1994

1. Extension of the Policy on Enforcement of RCRA Section 3004(j) Storage Prohibition at Facilities Generating Mixed Radioactive/Hazardous Waste - Policy Statement

EPA issues an extension of its policy (56 FR 42730, 8-29-91) on the civil enforcement of the storage prohibition in section 3004(j) of the Resource Conservation and Recovery Act (RCRA) at facilities which generate mixed waste. This policy statement renews the August 1991 policy statement for two years, based on EPA's determination that the availability of treatment and disposal capacity has not sufficiently changed since the original policy statement. Under this policy EPA considers violations of 3004(j) involving relatively low volumes of wastes which are stored in an environmentally responsible manner to be a reduced priority among EPA's potential civil enforcement actions. The policy describes the minimum steps required to demonstrate that a mixed waste facility is managing its waste in an environmentally responsible manner. This policy only applies to mixed waste facilities which generate less than 1,000 cubic feet of mixed waste during the 1994 calendar year. This policy does not apply to executive branch federal facilities, including those of DOE. Executive branch facilities are covered by section 102(c) of the Federal Facilities Compliance Act which waives sovereign immunity with respect to 3004(j) fines and penalties so long as the waste is stored in compliance with all other applicable requirements. This policy terminates on April 20, 1996. (4-20-94, 59 FR 18813, RU# 840-302.00)

2. Natural Resource Damage Assessments - Final Rule

This final rule (NPRM: 4-29-91) amends the regulations in 43 CFR 11 for assessing natural resource damages. This rulemaking is a result of the court opinion in *State of Colorado v. United States Department of Interior*, 880 F.2d 481 (D.C. Cir. 1989) which challenged the natural resource damage assessment regulations. The court ordered the Department to revise its regulations to address three issues of the type B assessment: (1) reflect the statutory preference for using restoration costs as a measure of damages; (2) allow for the recovery of all reliably calculated lost values, including both lost use and lost nonuse values, with no specific hierarchy of valuation methodologies; and (3) clarify the regulation's scope as to its applicability to natural resources which are not actually owned by the government. The final rule addresses all of these issues except for the assessment of lost nonuse values. The original rule provided for damages of the lesser of the cost of restoration or the diminution in value of the injured resources. This final rule amends the regulations to provide for restoration costs as the basic measure of damages. The final rule does not include any exceptions to this basic measure of damages since the Department believes that some form of restoration will always occur. In addition, the rule gives the trustee discretion in adding damages for the value of the resources services lost to the public from the date of the discharge or release until restoration is complete. The final rule uses the term "compensable value" to encompass the value of resource services lost to the public including lost use values and lost nonuse values. This final rule

eliminates the hierarchy of valuation methodologies from the original rule and leaves the determination of which methodology to use up to the trustee. The preamble to the original final type B rule indicated that privately owned natural resources were not to be included in damage assessments. In this final rule the Department clarifies that its intent was to follow the statutory definition incorporated in the original final type B rule which includes natural resources other than those owned by the government. This final rule adds the requirement that trustee officials document their basis for assertion of trusteeship. Since the basic measure of damages has been changed to the statutory preference of restoration costs, the final rule requires the trustee to prepare a preliminary assessment of restoration damages before beginning the Assessment Plan. The final issue addresses the date of promulgation of the natural resource damage assessment regulations which triggers the statute of limitations in CERCLA for bringing a claim. The final rule states that the date of promulgation is the "date on which final rules revising both the type A and type B rules in compliance with *Ohio v. Interior* and *Colorado v. Interior* are published." This final rule is effective on April 25, 1994.
(3-25-94, 59 FR 14262, RU# 180-025.00)

3. Nuclear Safety Management - Final Rule

This final rule (NPRM: 12-9-91) promulgates sections of Part 830 on Nuclear Safety Management to establish standards for the safe management of DOE and subcontractor work at DOE's nuclear facilities. The final rule promulgates two sections: the general provisions and the provision for adopting and implementing a formalized quality assurance program. The scope of the rule encompasses all DOE facilities except for activities regulated by the NRC or NRC Agreement States, activities conducted by the Naval Nuclear Propulsion Program, or activities conducted under the Nuclear Explosives and Weapons Safety Program. Also, in the general provisions it places the responsibility for implementing and complying with the provisions of Part 830 on the contractor responsible for managing and operating the DOE facility. The Quality Assurance section requires the development and implementation of a formalized quality assurance program. This program must be approved by DOE and will be used to evaluate contractor performance. The final rule establishes quality assurance criteria which must be addressed in the quality assurance plan. Within 180 days after May 5, 1994, contractors are required to submit to DOE a current quality assurance plan and implementation plan for approval. This final rule is effective on May 5, 1994.
(4-5-94, 59 FR 15852, RU# 100-290.00)

4. Protection of Stratospheric Ozone - Final Rule

This final rule (NPRM: 5-12-93) establishes EPA's Significant New Alternatives Policy (SNAP) program on evaluating and regulating substitutes for ozone depleting chemicals which are being phased out under the stratospheric ozone protection provisions of the Clean Air Act (CAA). The final rule covers the use of substitutes in the following sectors: refrigeration and air conditioning, foam blowing, solvents cleaning, fire

suppression and explosion protection, tobacco expansion, adhesives, coatings and inks, and aerosols and sterilants. A ninth sector, pesticides, will be added in future rulemakings. The SNAP program consists of four main activities: development and administration of a program to identify and evaluate substitutes, review of existing substitutes under the criteria of the SNAP program and publication of a list of acceptable and unacceptable substitutes, review of additional substitutes as they are developed, and dissemination of information about acceptable substitutes through a clearinghouse and outreach program. Under the final rule there are three basic means to add or delete chemicals from the SNAP lists. First, EPA will review and either grant or deny petitions to add or delete substances from the list of acceptable and unacceptable alternatives. The second means is by the notification process in which industry must notify EPA 90 days prior to the introduction into interstate commerce of a substitute which replaces a substance covered by the stratospheric provisions of the CAA. The responsibility to notify EPA resides with the person who first introduces the substitute into interstate commerce. The final rule sets out several exemptions to the notification requirements including substitutes already listed by EPA, small volume use of a substitute, research and development, and test marketing. The final way to amend the list of acceptable and unacceptable alternatives is by the initiative of EPA. EPA may change a previous SNAP determination based on new information on a existing substitute or additional substitutes. The final rule includes a list of acceptable and unacceptable substitutes. The final rule allows the end-user to use unacceptable substitutes which were in their possession prior to March 18, 1994. This final rule is effective on April 18, 1994.

IRIS DATABASE UPDATE

A DOE EH-231 Memorandum entitled *Integrated Risk Information System (IRIS) and Availability of Chemical Risk Assessment Guidance* was distributed in June 1991 to DOE Program Offices and Field Organizations. Attachment 1 to the memorandum, an ORNL-ESD report discussing access to and utilization of the *IRIS* online database, included "Table 1. *IRIS* Chemicals With Reference Doses and Carcinogen Assessments." The *IRIS* database has been updated extensively since that table was generated. The following table is the bimonthly updated version of Table 1 including all the chemicals listed in Table 1 along with additions/changes to the database planned through April 30, 1994. Additions/changes are those listed in the online *IRIS* database as accessed by our personnel through the National Library of Medicine. Changes in our table are shaded for ease of identification. Future issues of the *Environmental Regulatory Update Table* will include updates to the *IRIS* database during the previous two months. ***Use only the most current version of the table.***

(Any questions or comments about how the chemical information for this *IRIS* Table is selected, downloaded and compiled should be addressed to Ms. Kim Slusher, Oak Ridge National Laboratory, (615) 576-1746).
