INTERNATIONAL ENERGY: Research Organizations, 1988-1992

PURPOSE

The *International Energy: Research Organizations* publication contains the standardized names of energy research organizations used in energy information databases. Involved in this cooperative task are (1) the technical staff of the U.S. DOE Office of Scientific and Technical Information (OSTI) in cooperation with the member countries of the Energy Technology Data Exchange (ETDE) and (2) the International Nuclear Information System (INIS).

ETDE member countries are also members of the International Nuclear Information System (INIS). Nuclear organization names recorded for INIS by these ETDE member countries are also included in the ETDE Energy Database. Therefore, these organization names are cooperatively standardized for use in both information systems.

This publication identifies current organizations doing research in all energy fields, standardizes the format for recording these organization names in bibliographic citations, assigns a numeric code to facilitate data entry, and identifies report number prefixes assigned by these organizations. These research organization names may be used in searching the databases "Energy Science & Technology" on DIALOG and "Energy" on STN International. These organization names are also used in USDOE databases on the Integrated Technical Information System. Research organizations active in the past five years, as indicated by database records, were identified to form this publication. This directory includes approximately 31,000 organizations that reported energy-related literature from 1988 to 1992 and updates the *DOE Energy Data Base: Corporate Author Entries* (DOE/TIC-4585-R5).

Cumulative supplements for this publication will be issued periodically.

ARRANGEMENT

This publication is presented in three parts. Part 1 is an alphabetical listing of all organization names plus the report prefixes assigned by each organization. Each organization is identified by a unique seven-digit code. Part 2 lists organization names in alphabetical order under the country in which they are located. International organizations appear as separate entries, and international societies which are not headquartered in a particular country appear under the heading "International Organizations without Location." Part 3 lists Report Number Prefixes established in the past five years and their assigning organizations. Part 3 provides an update of *DOE Energy Data Base: Report Number Codes* (DOE/TIC-85-Rev.14).

Organization names follow the *Guidelines for Standardized Entry of Corporate Bodies* (IAEA-INIS-6 (Rev. 21)), 1989. Although based on the Commerce, Energy, NASA, Defense Information (CENDI) *Guidelines for Descriptive Cataloging of Reports* (PB86112349, Washington, DC, 1985), the INIS guidelines were developed to reflect international needs and to provide user-friendly online retrieval.

The two-letter country codes are based on the International Standard ISO 3166-1988, *Codes for the Representation of Names of Countries.*

STRUCTURE OF CORPORATE ENTRIES

The elements of an organization's name are arranged to form a corporate entry in the following sequence:

1. The largest element (parent organization).
2. The location.
3. The smallest element (suborganization), if provided.

Example: Texas Univ., El Paso, TX (USA). Dept. of Chemistry

The entry for this organization includes the valid 7-digit corporate code and the 2-letter country code, as:

Texas Univ., El Paso, TX (USA) 9506205 US
Dept. of Chemistry 9521247 US
Dept. of Civil Engineering 9501641 US
Dept. of Electrical Engineering 9510292 US

The organization name and the location are followed by all sub-element entries. The code for each entry represents the complete name.

Example: Aix-Marseille-2 Univ., 13 - Marseille (France) 0145050 FR
Centre Universitaire de Luminy 0145060 FR
Dept. de Physique Mathematique 0145070 FR

Therefore, the complete name of the first sub-element organization above would appear as:

"Aix-Marseille-2 Univ., 13 - Marseille (France). Centre Universitaire de Luminy"

In order for the smallest element to be identifiable, the entry for the following multilayered organizations begins with the organization acronym:

Akademiya Nauk (AN)
Commissariat a l'Energie Atomique (CEA)
United Kingdom Atomic Energy Authority (UKAEA)
United States Department of Energy (USDOE)

Cross-References

Two types of cross-references appear: "use" and "changed to." The *use* is applied to an invalid entry and leads to the correct entry:

Examples: Campinas Univ. (Brazil) 1186400 BR
Use Universidade Estadual de Campinas, SP (Brazil) 6505700

GECEL, 75 - Paris (France) 9150262 FR
Use Groupement Industrial pour l'Etude d'une Chaufferie a Eau Lorde (GECEL), 75 - Paris (France) 9100222

The "changed to" cross-references identify name changes. The earliest valid name contains a *changed to* reference leading to the new name. This procedure has been introduced to permit the use of earlier forms of corporate names when cataloguing literature issued by the organization prior to its current name. A "changed from" reference is made from the current name to the old name.

Example: Technische Hochschule, Graz (Austria) 6103000 AT
Changed to Technische Univ., Graz (Austria) 7041310

Technische Univ., Graz (Austria) 7041310 AT
Changed from Technische Hochschule, Graz (Austria) 6103000

"Changed to" and "changed from" entries may be used for input. Entries with a "use" reference are invalid (see above) and direct the user to the correct entry.

When submitting records to ETDE, it is sufficient to enter a corporate code and country code instead of the full name of the corporate organization, provided it appears in this Directory.

Comments or suggestions regarding this publication should be directed to the Information Analysis and Quality Assurance Division, Office of Scientific and Technical Information, U.S. Department of Energy, P.O. Box 62, Oak Ridge, TN 37831 U.S.A.
