

Exceptional service in the national interest

Sandia National Laboratories

J. Stephen Rottler, PhD
Chief Technology Officer / Vice President of Science & Technology

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000.

Sandia's History

Jerrold Zacharias, c1945,
led the transfer of the Z Division
to SNL from LANL

Sandia's Governance Structure

Government-Owned, Contractor-Operated

Sandia Corporation

- AT&T: 1949–1993
- Martin Marietta: 1993–1995
- Lockheed Martin: 1995–present
- Existing contract expires 9/30/12

Federally Funded
Research & Development Center

Sandia's Sites

Albuquerque,
New Mexico

Livermore,
California

Tonopah, Nevada

Waste Isolation Pilot Plant,
Carlsbad, New Mexico

Pantex, Texas

Sandia's Workforce

- On-site workforce: 10,459
- Regular employees: 8,949
- Technical Staff: 4,357

Sandia's Mission Work Reflects the Nation's Security Challenges

Our Diversified Customer Portfolio

High reliability, high consequence of failure, challenging environments, and technology solutions

Nuclear Weapons

Integrated,
Engineered Warhead
Systems

Arming, Fuzing, and
Firing Systems

Surety Systems

Gas Transfer Systems

Neutron
Generators

Sandia's core products for nuclear weapons
stockpile management

Defense Systems & Assessments (DSA)

Materials International Space Station Experiment

Real-time SAR images

Predator UAV with SAR

Ground sensors
for future
combat systems

Small robotic vehicle

Shuttle return
to flight

MEMS louvers

Target launch for
Ballistic Missile Defense

Energy, Climate, & Infrastructure (ECIS)

Energy Supply, Energy Efficiency,
& Environmental Stewardship

Safe, Secure, Reliable Energy;
Water Supply & Infrastructure

Climate Change-
Mitigate and Adapt to
Changes

International, Homeland, and Nuclear Security (IHNS)

Lab on a Chip

Bio/Chemical
Security

RSC Publishing | Point-of-care Microfluidic Diagnostics

Border and Maritime security

Aviation and Explosives
security

Emergency Response

Weapon Security

Nuclear/Radiological Threat Reduction

Strong Research Foundations Enable Mission Performance

Advancing the Frontiers for National Security

Truman Fellow Carlee Ashley
and Sandia Fellow Jeff Brinker

One-dose killing of cancer cells through targeted drug delivery

- By melding nanotechnology and medicine, research has produced an effective strategy to target a cancerous cell and deliver a mélange of killer drugs into it.
- This new delivery system results in 106-fold higher therapeutic efficacy when compared with other state-of-the-art liposomal delivery systems.
- These findings promise to mitigate the side effects of conventional chemotherapy.

Advancing the Frontiers for National Security

World's smallest battery

Jianyu Huang

- A tiny rechargeable lithium-based battery formed in a transmission electron microscope with an anode that is a single nanowire only one seven-thousandth the thickness of a human hair.
- Nanowire-based materials in lithium ion batteries offer significant improvements in power and energy density over bulk electrodes.
- The research observations of structural kinetics and amorphization have important implications for high-energy battery design and mitigating battery failure.

Advancing the Frontiers for National Security

Dan Sinars

Measuring fundamental instabilities in magnetically driven Z-pinch explosions

- This research addresses the important but poorly understood phenomenon of Magneto-Rayleigh-Taylor (MRT) – the damaging instability in Z-pinch magnetic fields – and conditions that could mitigate the problem.
- The results will significantly impact high energy density plasmas, inertial confinement fusion, and related fields.

Advancing the Frontiers for National Security

Craig Taatjes

Tailoring biofuels to work with vehicles of today and tomorrow

- Biofuels being investigated are produced by a fungi that grow on cellulose and digest it, forming fuel-type hydrocarbons as a by product of their metabolic processes.
- This material can be converted into compounds that are similar to those found in petroleum-derived fuels.
- Combustion experts are working directly with biofuels researchers to understand from the start what will work best for existing and future internal combustion engines.

Advancing the Frontiers for National Security

Glitter-sized photovoltaic cells

- Tiny crystalline silicon photovoltaic cells 14 to 20 micrometers thick, 0.25 to 1 mm across.
- Formed on silicon wafers, etched, and released in hexagonal shapes with electrical contacts prefabricated on each piece.
- Achieved 15% efficiency for 14 micron thick silicon cell.
- Goal is to perform at greater than 50% efficiency.

Greg Nielson

SNL Maintains Strategic Partnerships With Key Universities – Including Texas A&M

*Recruit, retain
and develop
the best and
brightest*

*Build two-way
relationships of
mutual benefit and
advocacy*

*Conduct collaborative
world-class R&D to
support mission needs*

If These Challenges Interest You...

- Focus on academic excellence
- Obtain an advanced degree
- Seek opportunities beyond the classroom to become more well-rounded
- Obtain internships or summer positions that will allow you to experience practice of engineering

Sandia's Core Values

- Serve the nation
- Deliver with excellence
- Respect each other
- Act with integrity
- Team for great results

What is leadership at Sandia?

- Making a personal commitment to national service
 - Establishing and exhibiting the highest standards
 - Creating an environment for innovative and creative thinking
 - Anticipating and providing solutions to the nation's most daunting problems
- Building a reputation for delivering results
 - Having the courage to deal with complexity, ambiguity, and change
 - Meeting or exceeding customer expectations and performance commitments every time
 - Being accountable and executing with quality
- Establishing relationships based on trust
 - Investing time in others
 - Treating others with integrity, respect, and mutual regard

Lessons I Did Not Learn in College

- Leadership skills ≠ management skills
- The power of good communication skills
- The importance of relationships
- The effectiveness of multi-disciplinary teaming
- The utility of a well-rounded education
- The necessity of continuous learning
- Excellence in engineering as an ethical imperative
- The satisfaction of investing in community activities

Closing Remarks

- SNL has helped maintain an effective US nuclear deterrent for over 60 years
- We provide timely solutions to a vast array of national security problems
- We rely on world-class science and engineering, and the capability to develop product that meets rigid specifications
- A broad spectrum of technical talent is essential to meet national security challenges
- Sandia provides opportunities to change career fields and encourages continuing education
