

3S Framework

Dr. Robert Finch
International Nuclear Threat Reduction
Sandia National Laboratories

"3S" Integration

Nuclear Safety

Operating conditions, prevention of accidents/mitigation of consequences, resulting in the protection of workers, the public, and the environment from undue radiological hazards

Nuclear Safeguards

Prevention and detection of theft or diversion of special nuclear material from civilian facilities through the use of material control and accountancy

Nuclear Security

Prevention and detection of, and response to sabotage, unauthorized access, or other malicious acts involving nuclear material, other radioactive substances or their associated facilities

"3S" Culture

"3S" Integration

Safety

Security

Safe-
guards

"3S" Integration

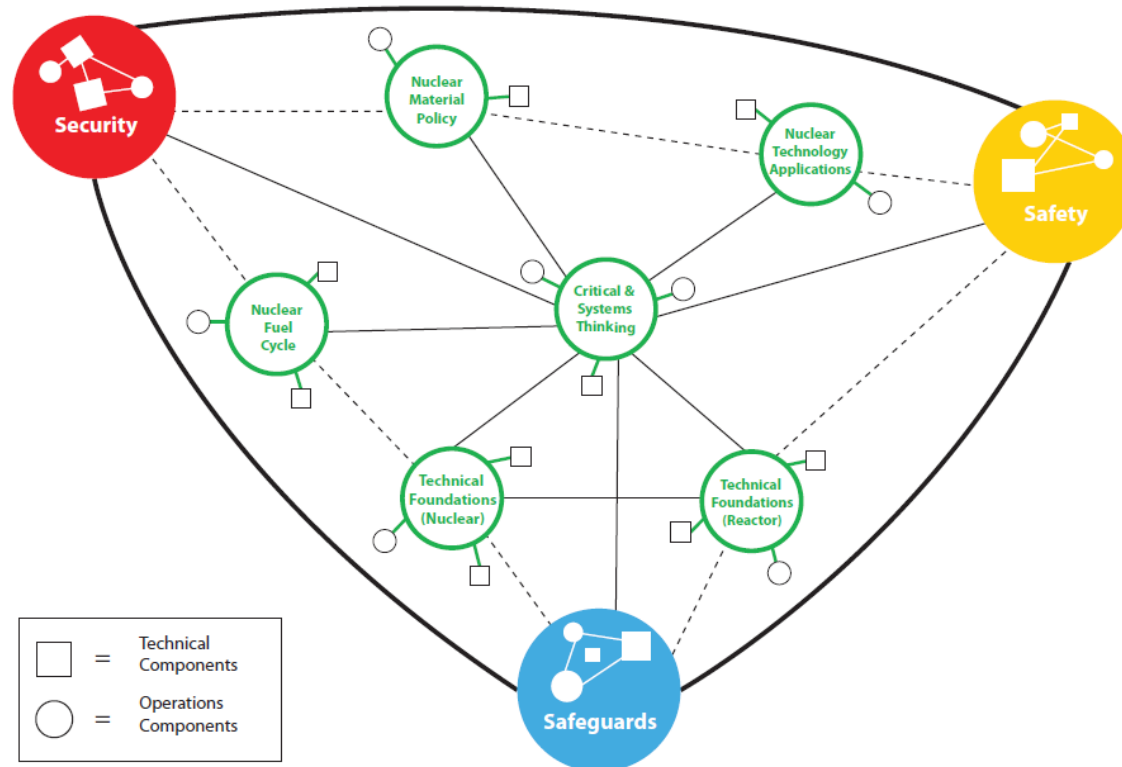

Elements work together to provide safe, secure, reliable, and economically viable electric energy

An Integrated 3S Framework

3S = Nuclear Safety, Security, and International Safeguards

An Integrated Nuclear Energy 3S Model:

Integrated Nuclear Energy "3S" Interactions

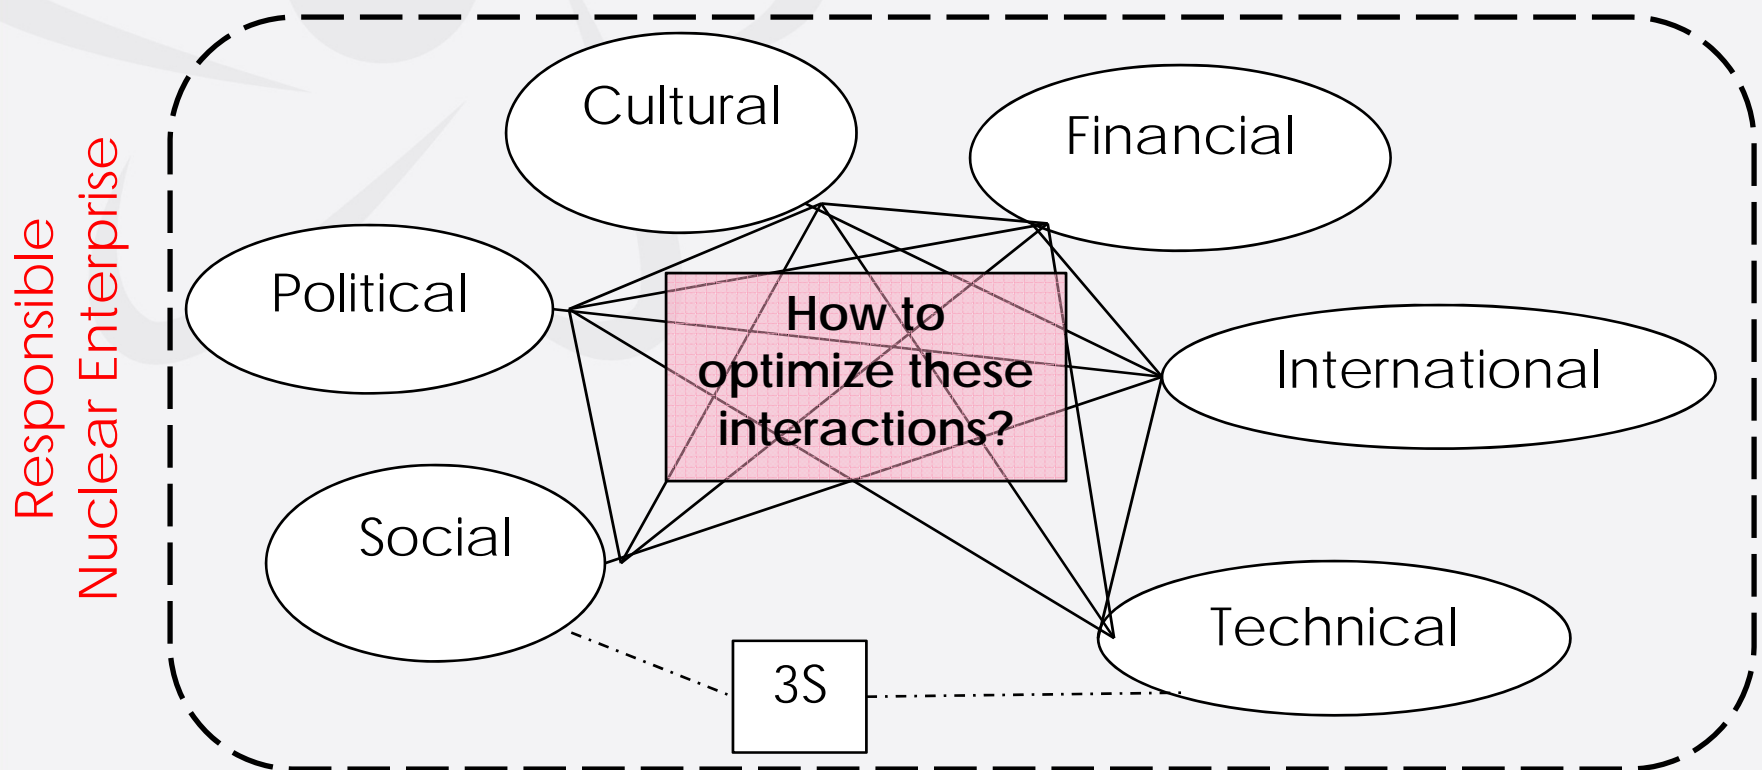

Responsible Nuclear Energy Program

- Integrated Safety, Security, & Safeguard (3S) Framework
- 1. Systems Analysis Approach
- 2. Critical Thinking

Thank you

What elements or factors affect or influence decisions related to an RNEP?

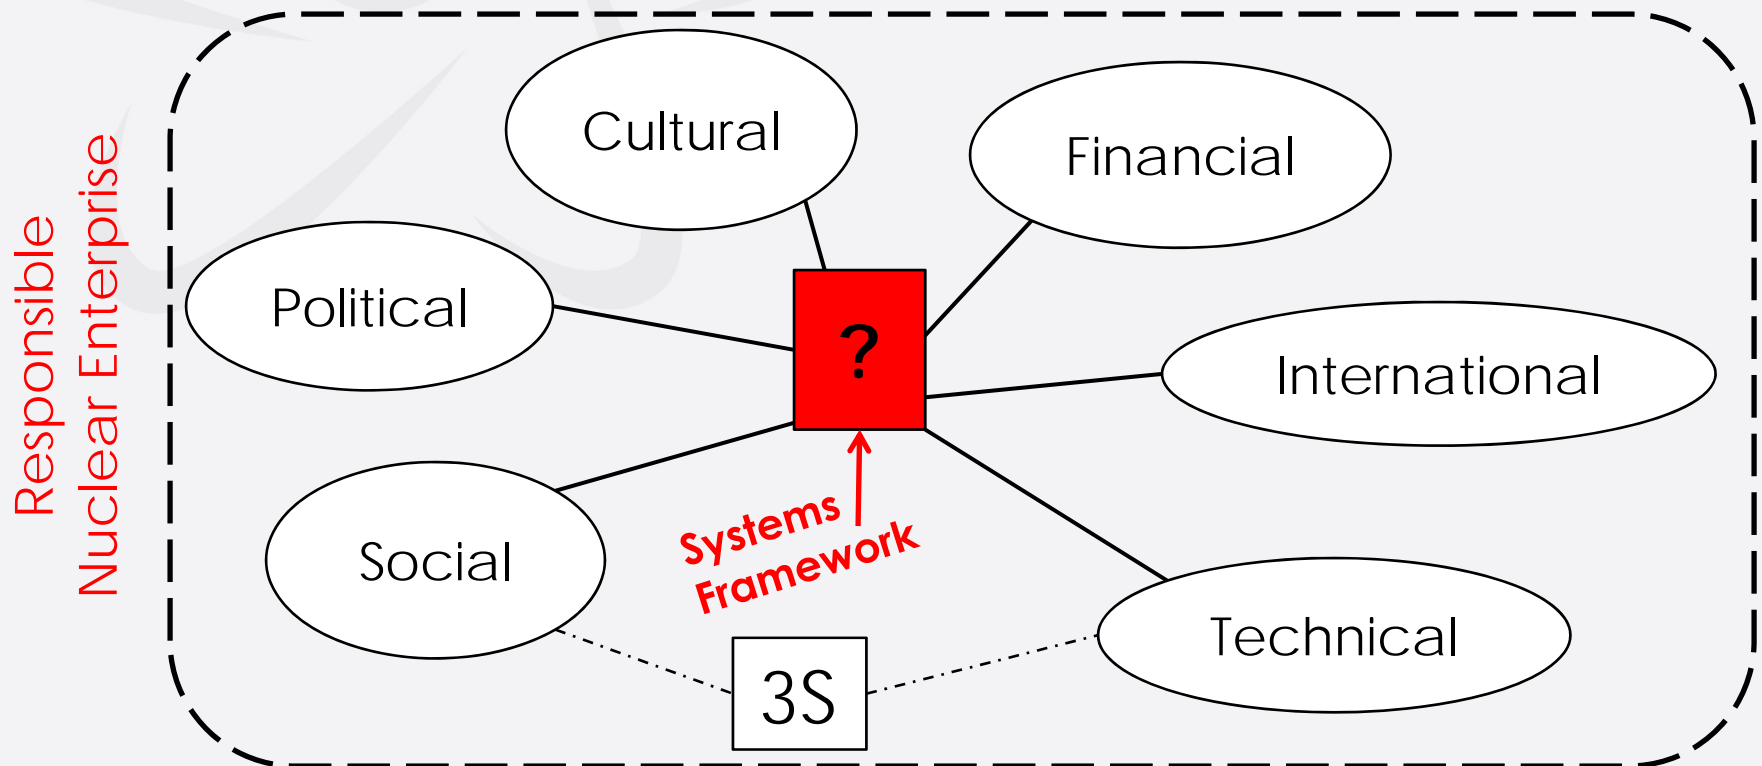

Understanding Responsible Nuclear Energy

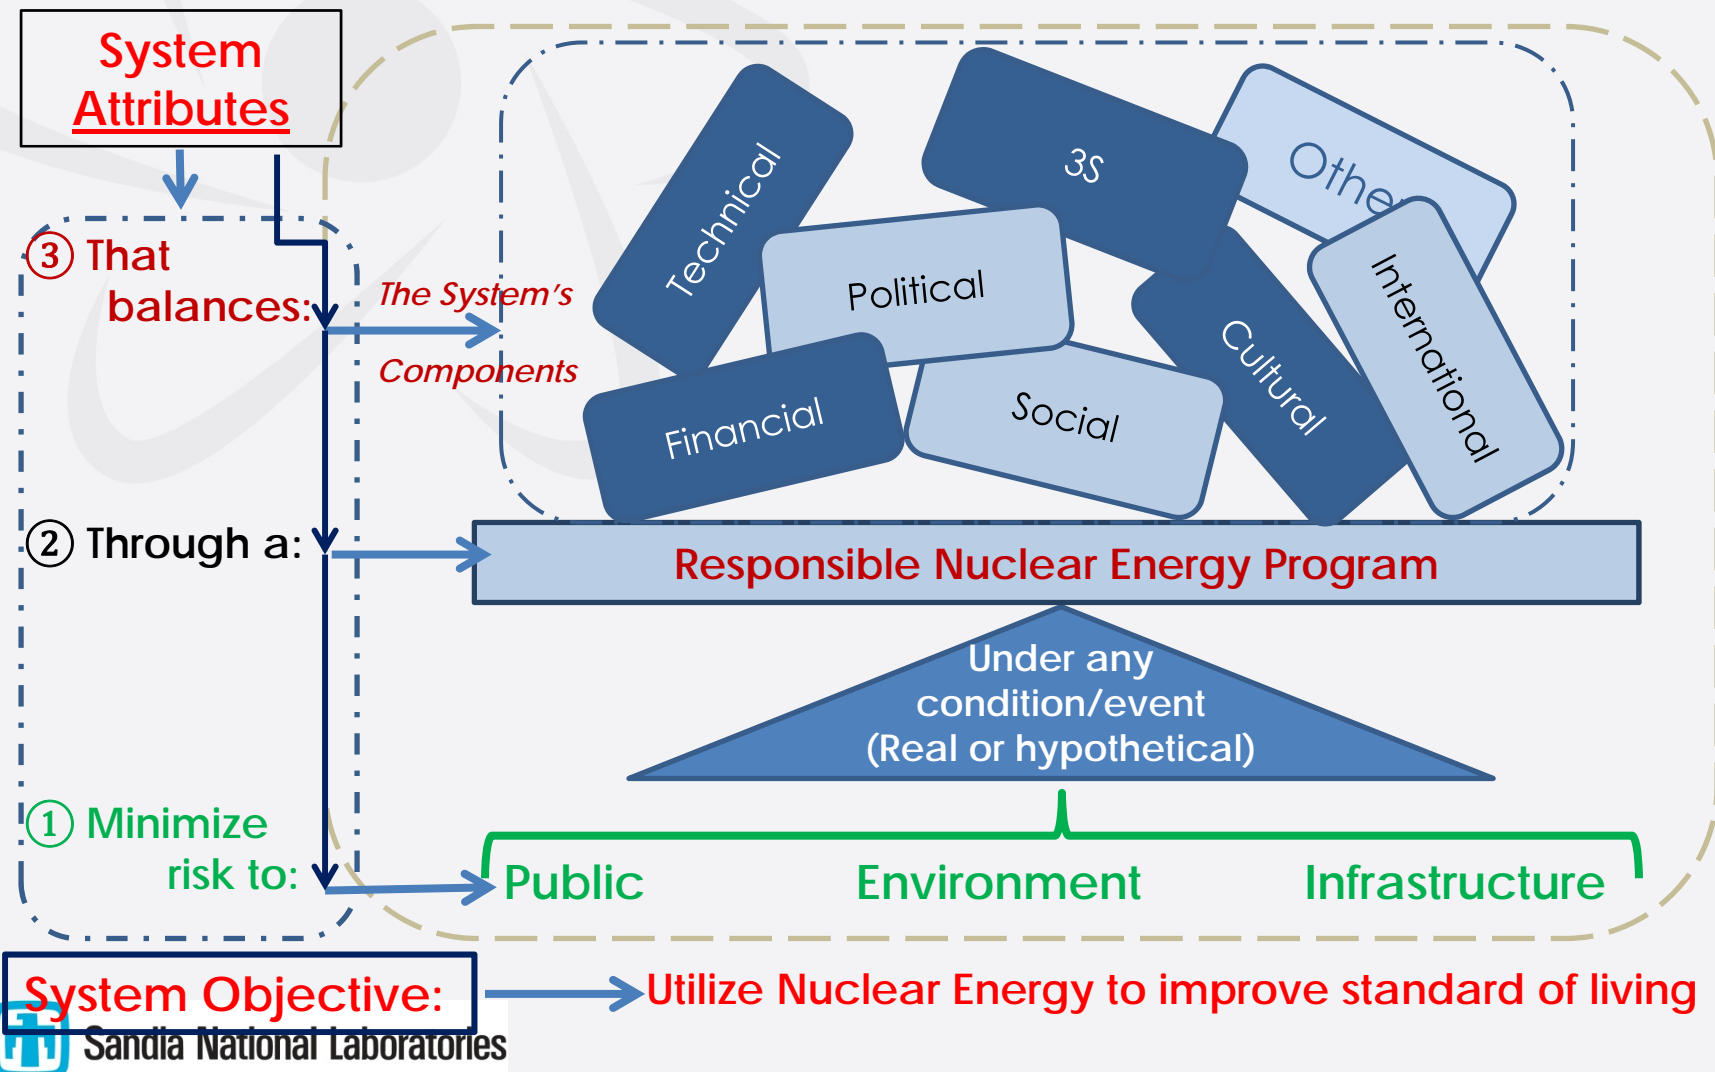

All of these elements are related, is there is a clear method for understanding these complex, adaptive relationships?

Our Answer (Hypothesis) is: **Systems Framework**

SYSTEM: Responsible Nuclear Energy Program

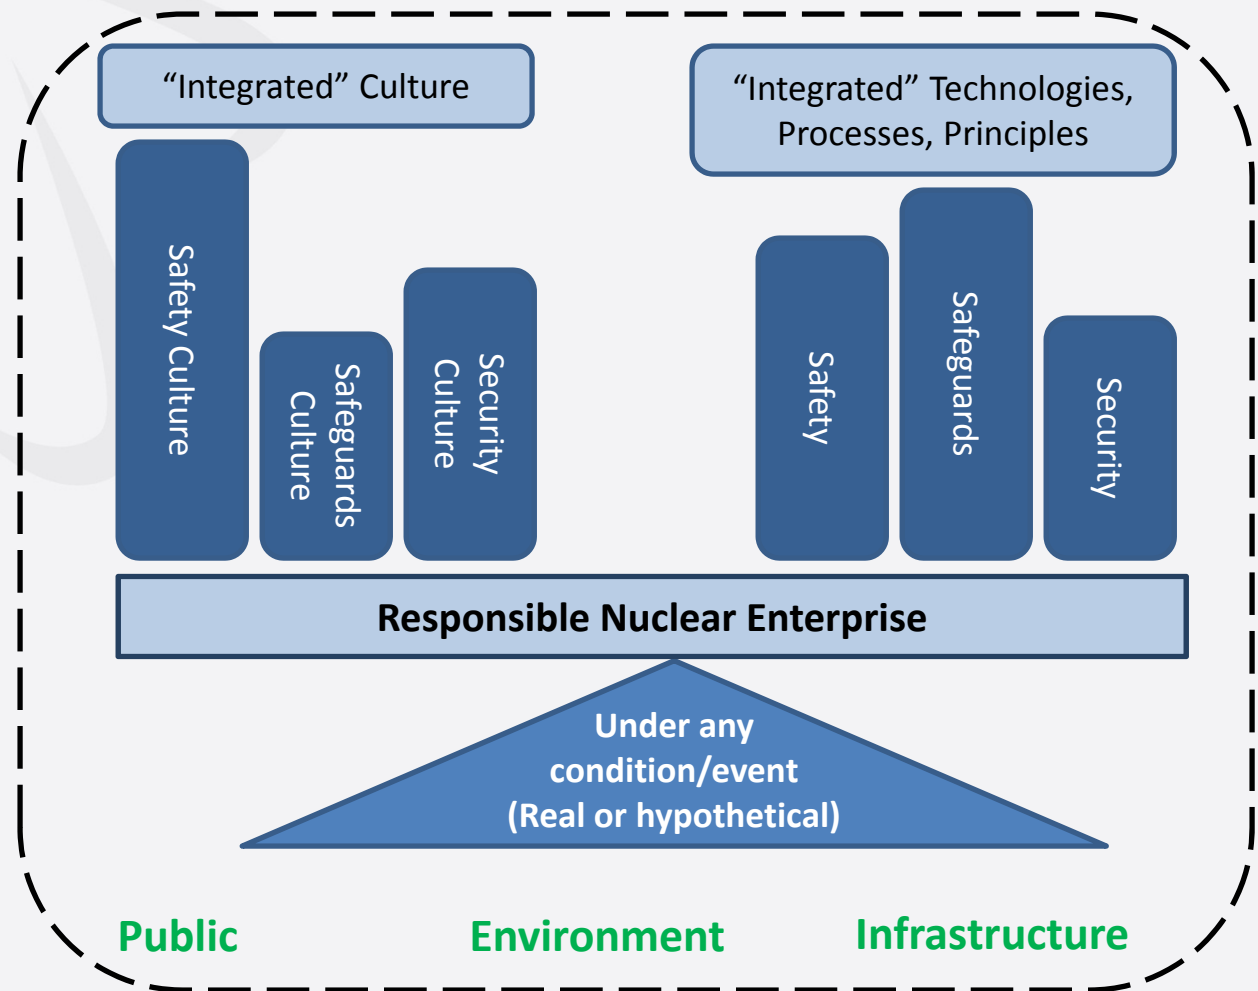

Current (Traditional) Integrated 3S Framework

- Prescriptive
 - Based individually established policies
- Descriptive
 - Focuses on interface between existent culture and tools
- Reactionary
- Stove-piped areas of expertise

3S Framework

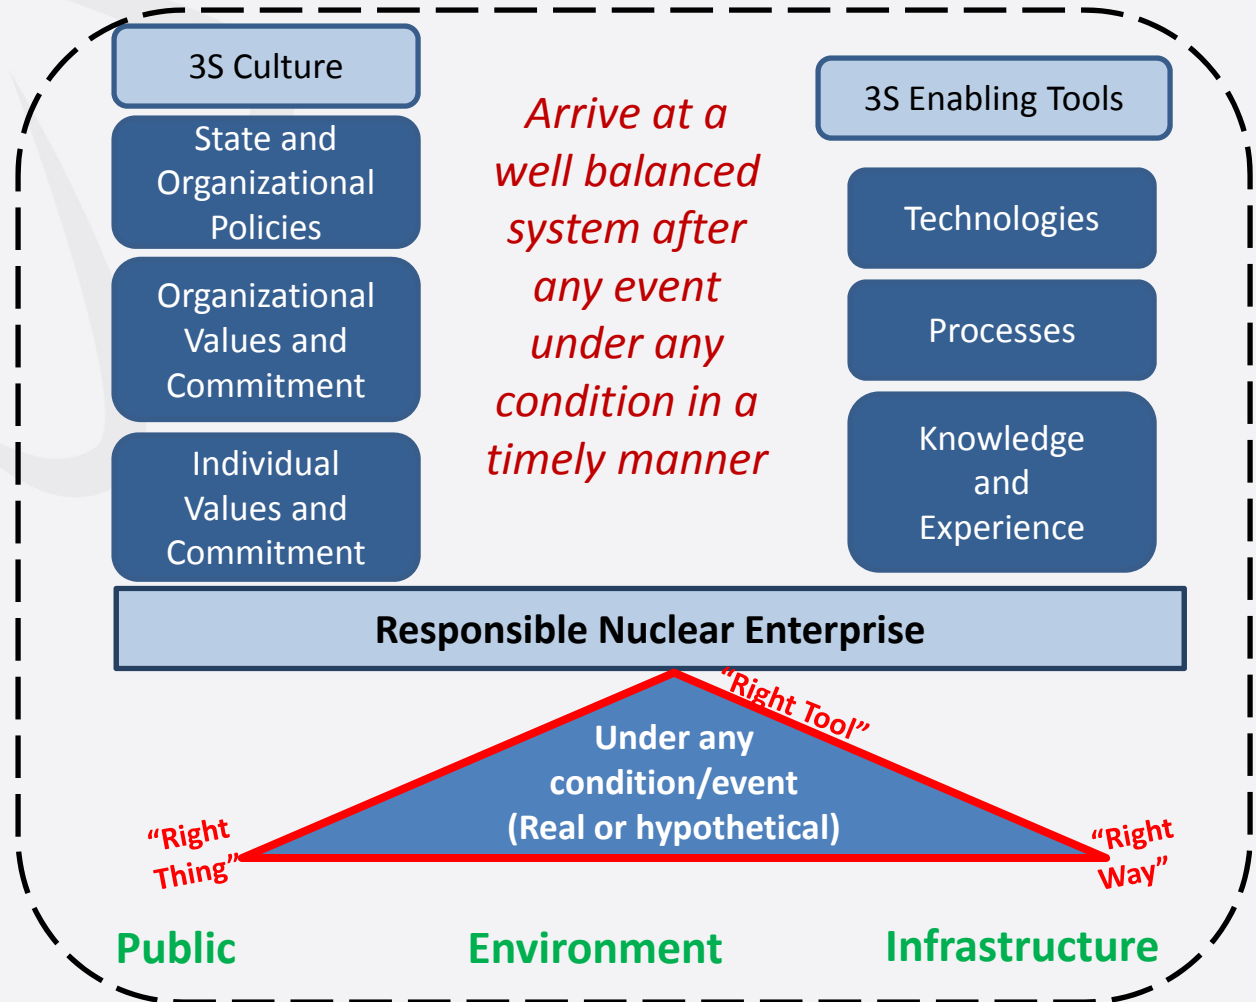

Proposed Model for Integrated 3S Framework

- Dynamic
 - Based on combining right thing, way and tool in timely manner
- Adaptive
 - Able to easily (and dynamically) find the balance; focuses on integrating necessary components of culture/tools
 - Feedback capable
- Proactive
- Comprehensive understanding across areas of expertise

Proposed Model for 3S Framework

A New Look at an Integrated 3S Framework

- A Strong 3S Framework should allow:
 - Identify “right thing”
 - Identify “right way”
 - Identify “right tool”
- A critical thinking and systems analysis approach considers both the:

All in the
“right time”

—3S Culture

- Individual (All) Values and Commitment
- Organizational Values and Commitment
- State and Organizational Policies

AND

—3S Enabling Tools

- Technologies
- Processes
- Knowledge and Experience

Critical Thinking: a process for consistent evaluation of thought processes and examinations of assumptions, values and behaviors

- Elements of thought
- Intellectual standards
- Intellectual traits

Systems Analysis Approach: developing and using complex mental models to analyze the mutual interaction of components of a system, or systems:

- Components
- Attributes
- Relationships

How to Impact 3S Culture?

- “Right thing” and “Right action” ...?
 - Decisions and options = choices
 - The “human factor” cannot be always regulated
 - Sets of values, beliefs, commitments, and attitudes
 - Individual & organizational
 - policies, processes,..
 - Examine decisions and actions (feedback)
 - Objective and consistent

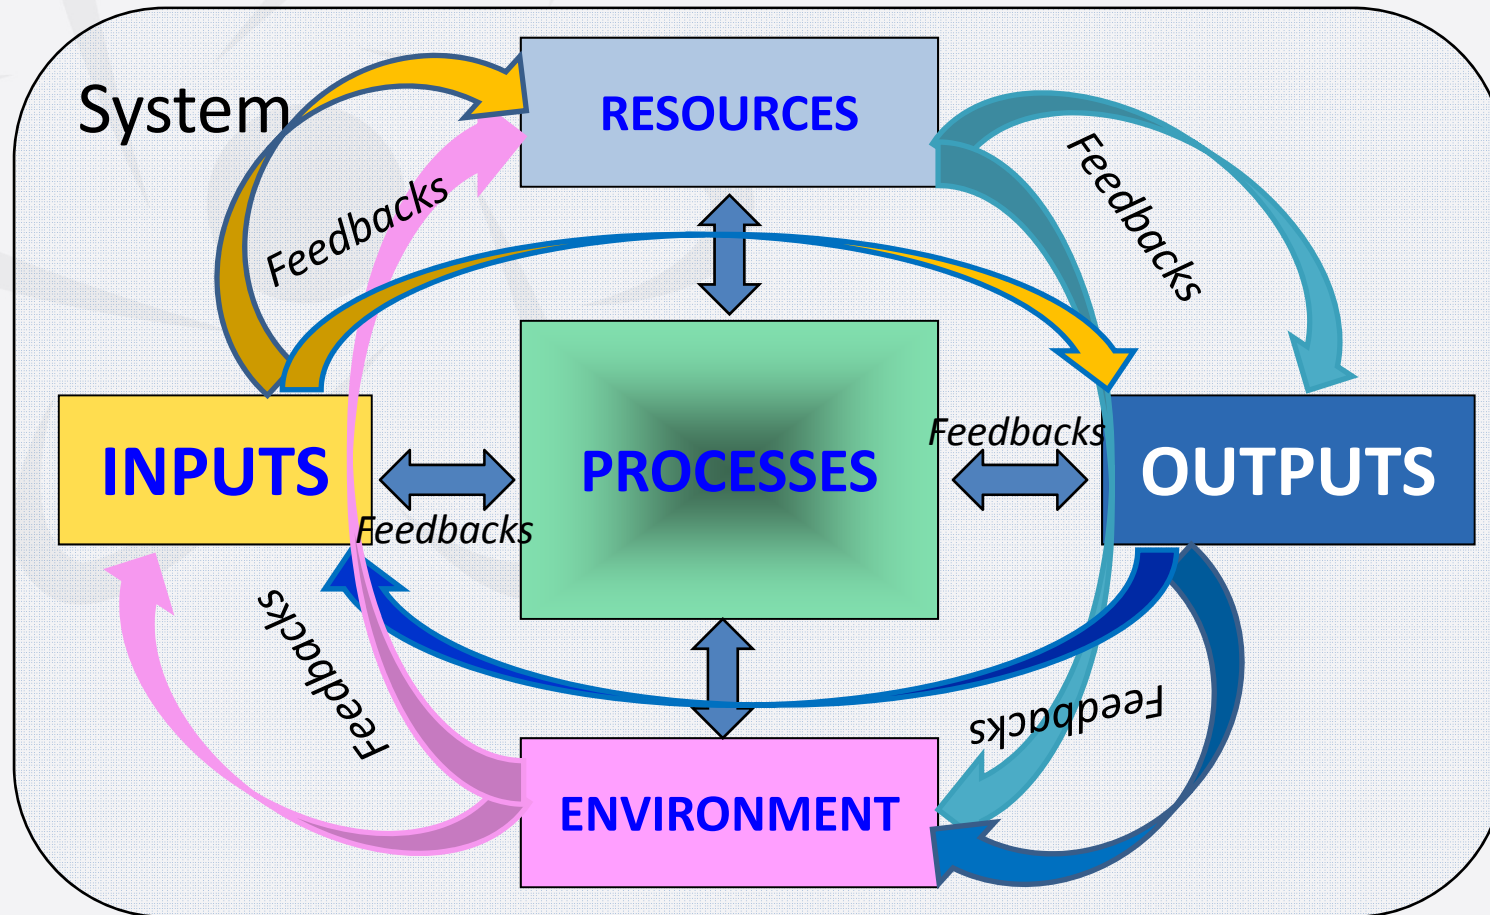

How to Impact 3S Culture?

- Basic Assumptions
 - Impact must be at the deepest level
 - Make a positive impact each individual's "values, beliefs and assumptions"
- *Fair-minded Critical Thinking*
 - Consistent evaluation of thought process
 - Examine values, beliefs and assumptions
- *Systems Thinking & Approach*
 - Analyze interactions among a system's elements & components

Why System Analysis Approach in 3S?

3S is a complex "system-of-systems"
each subsystem has many components with multiple interactions & feedbacks.
