Web-based Analysis - Themis Architecture

Canonical Correlation Analysis

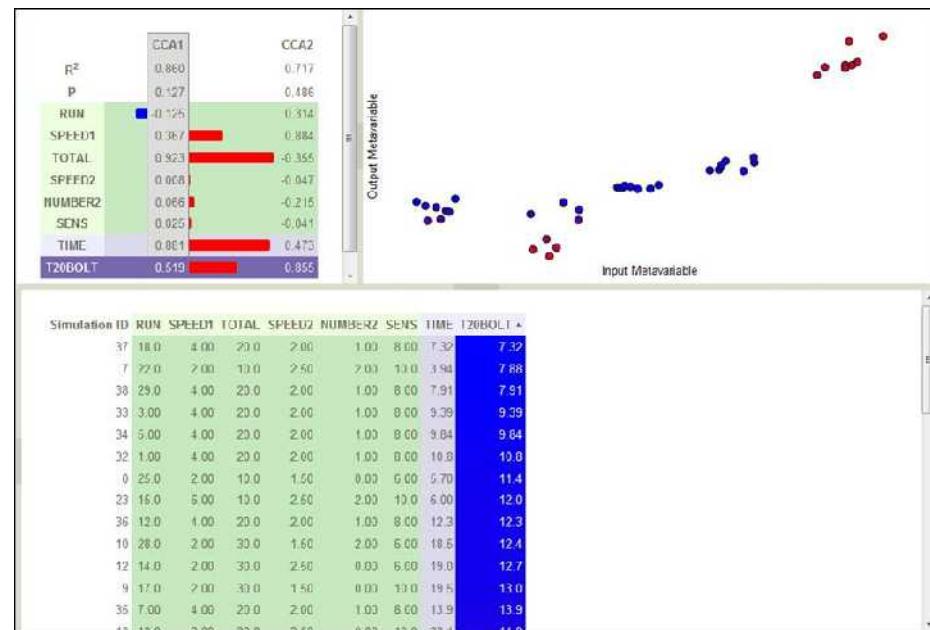

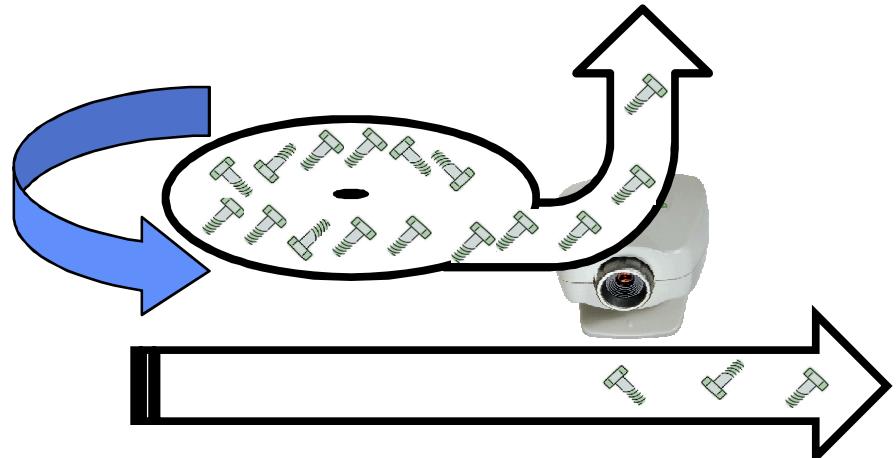

Car Data Example

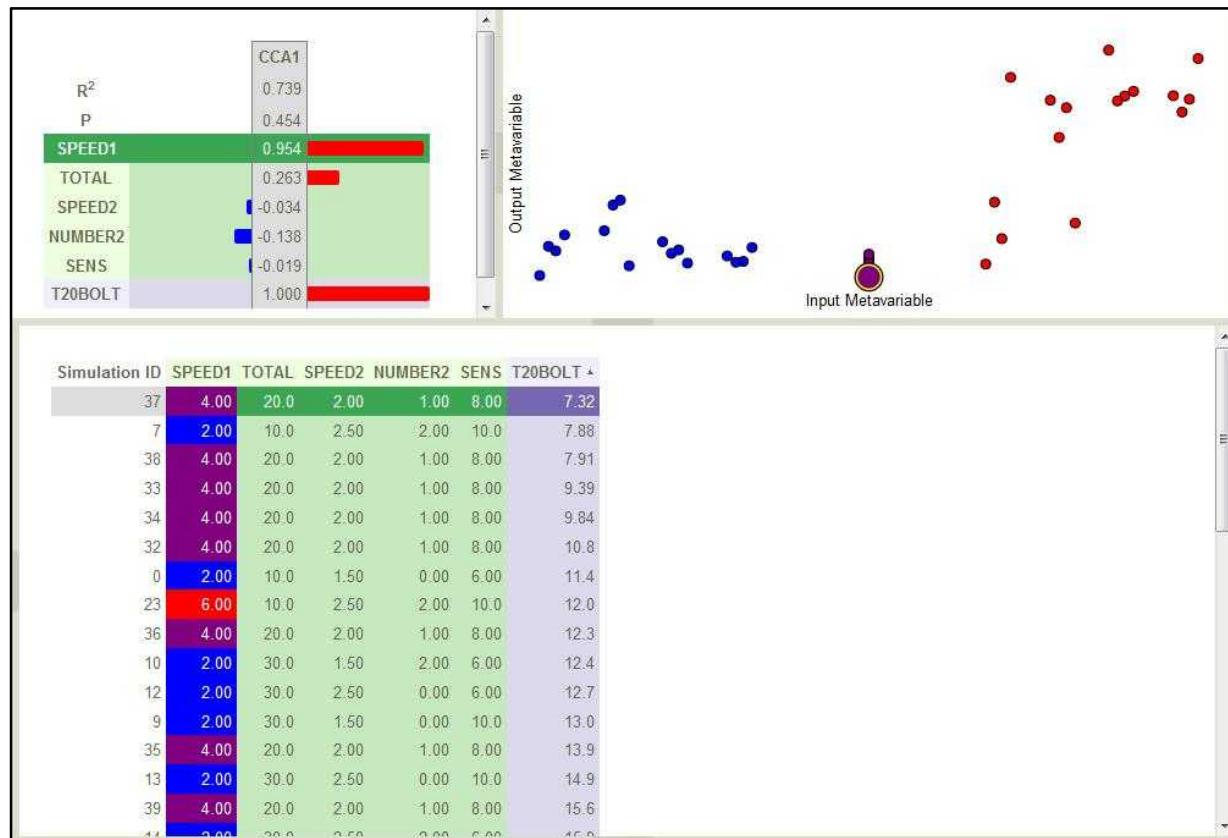

Bolts Data Example

- Automatic bolt counting machine
- Spinning plate forces bolts up spiral ledge
- Bolts fall past optical sensor that counts them
- Experiment with 40 samples
- Input parameters:
 - RUN: experiment order
 - SPEED1: speed of plate rotation
 - TOTAL: total number of bolts being counted
 - SPEED2: plate rotation speed for last few bolts
 - NUMBER2: number of bolts counted at SPEED2
 - SENS: sensitivity of sensor
- Output parameters:
 - TIME: seconds to count TOTAL
 - T20BOLT: time to count 20 bolts

Bolts Data

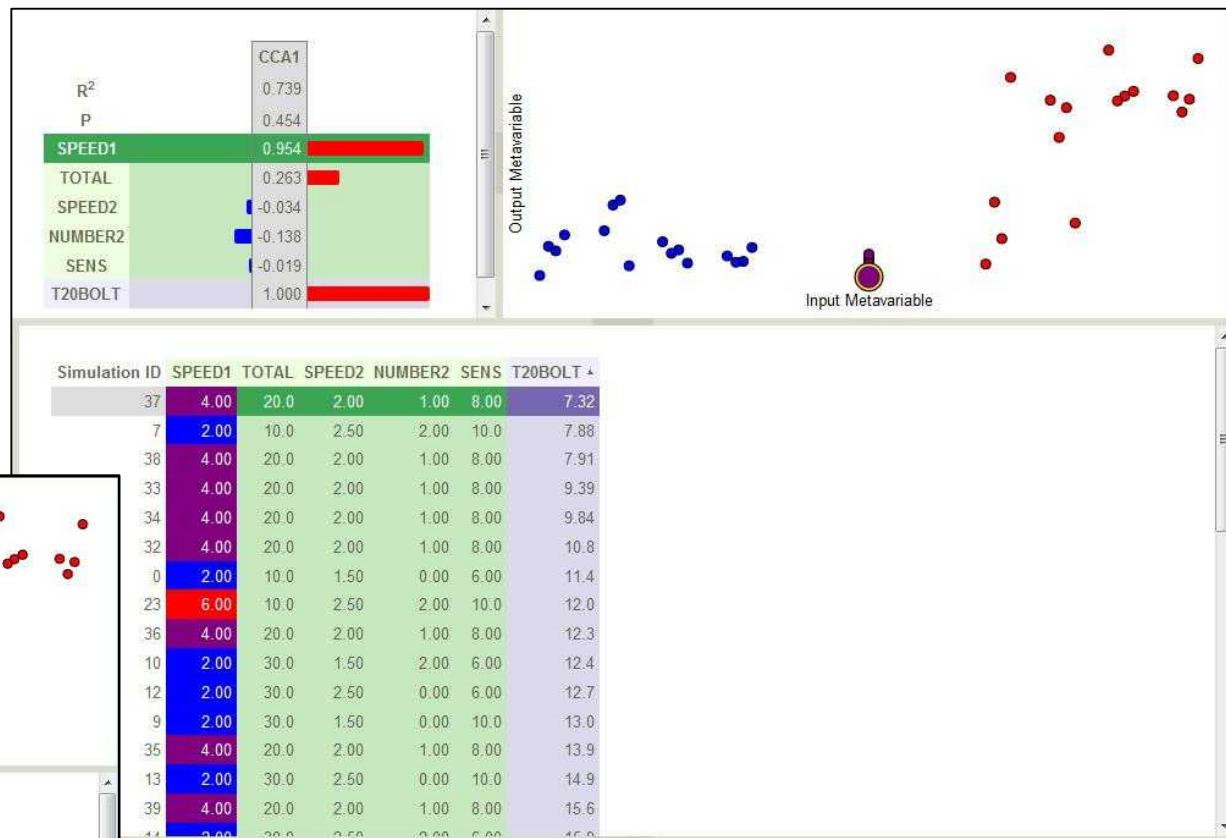

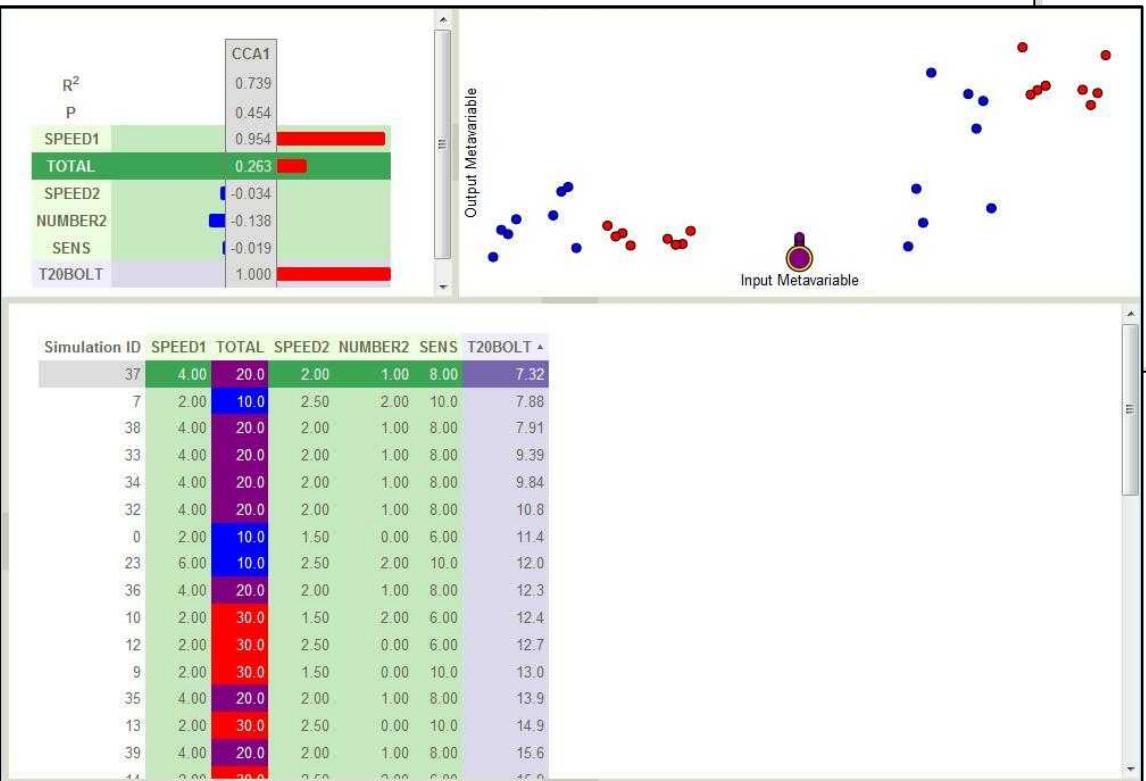

- Questions:
 - What adjustments have the greatest effect on the time to count 20 bolts?
 - How would you adjust the machine to get the shortest time to count 20 bolts?
 - Are there any unusual features to the data?

Bolts Data

- Questions:

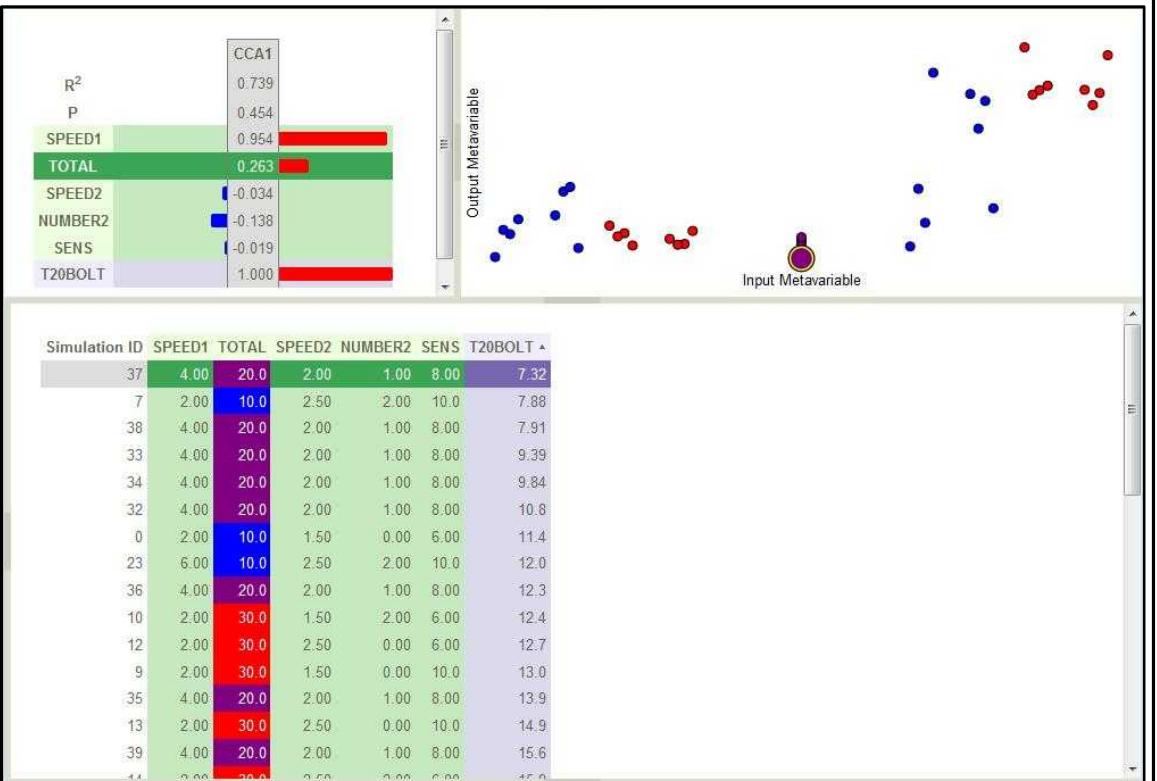

- What adjustments have the greatest effect on the time to count 20 bolts?
- How would you adjust the machine to get the shortest time to count 20 bolts?
- Are there any unusual features to the data?

Bolts Data

- Questions:

- What adjustments have the greatest effect on the time to count 20 bolts?
- How would you adjust the machine to get the shortest time to count 20 bolts?
- Are there any unusual features to the data?

Themis Provides

- Scalability
- Interpretability
- High-dimensional analysis (many-to-many)
- Abstraction + raw data
- Interactive hypothesis exploration
- Project-based access control
- Shared visualizations with annotations
