

Maintaining An Online Publication List

Tamara G. Kolda
Sandia National Labs
*Webpage Expert**

* Self-proclaimed

Importance of Online Publication List

- Take advantage of your rights to make your work accessible
 - Many journals allows the *Author's Final Version* to be posted on preprint servers like arXiv *
 - Some journals allow the *Published Version* to be posted on the author's home page *
- Make preprints available
 - Especially useful during job search
- Accuracy
 - Unusual names (O'Leary, van de Geijn)
 - Common names (Meza, Conroy)
- Two options
 - Use an online tool like Google Scholar
 - Maintain your own list
 - *Not mutually exclusive options*

Author's Final Version:
Final accepted version *before* copyediting and formatting by journal staff

Published Version:
Final version that appears in the journal *after* copyediting and formatting by journal staff

* SIAM allows authors these rights.

Interlude: Home Page Basics

- **Critical Information**
 - Actual clickable email
 - Work or mobile phone
 - Snail mail address
 - Brief bio ←
 - Publication list

- **Optional Information**
 - Picture
 - Skype, Twitter, Google+ ids
 - Software downloads
 - Awards
 - Service activities
 - Copies of talks

- **Keep it up to date**
 - Don't make it too complicated
 - Update with each new paper!

- **Avoid personal information**

Mathematicians generally fail to provide short bios, requiring the visitor to piece together a profile by clicking many links.

Evrim Acar (Ataman)
Assistant Professor

Address: [Faculty of Life Sciences](#)
[University of Copenhagen](#)
Rølgårdsvej 30,
DK-1958 Frederiksberg C

E-mail: evrim.acarataman@gmail.com
evrim@life.ku.dk

Evrim Acar is an Assistant Professor at [LIFE](#) at University of Copenhagen, Denmark. Her research interests are data mining, machine learning, and mathematical modeling; in particular, tensor decompositions and their applications in social network analysis, computational neuroscience and chemometrics. Evrim received the Danish Council for Independent Research Sapere Aude Elite Young Researcher Award in 2012.

Evrim received her MS and PhD in [Computer Science](#) from [Rensselaer Polytechnic Institute](#) (Troy, NY) in December, 2006 and May, 2008. She got her BS in [Computer Engineering](#) from [Bogazici University](#) (Istanbul, Turkey) in July, 2003. ([see CV](#))

“HELPER” SITES

Google Scholar

- **Benefits**
 - Easy to set up
 - Automatically finds articles
 - Easy to correct
 - Counts citations (generously)
 - People can “follow” you
 - You can track citations to your work

- **Cons**
 - Doesn't always link to the correct PDF
 - Generates poor BibTeX (no DOI)

- **How to get started**
 - Requires Google (aka Gmail) account

- **Highly Recommended**
 - Extremely low maintenance

Microsoft Academic Search

■ Benefits

- Most of what Google Scholar offers
- Includes DOI (unlike Google)
- Citation graph
- Top keywords, conferences, journals

■ Cons

- Slow to find papers and preprints
- Lots of mistakes
- Fewer statistics (e.g., H-index)

■ How to Get Started

- academic.research.microsoft.com

■ No Recommendation

- Lags behind Google in finding papers
- But really easy to set up...

The screenshot shows the Microsoft Academic Search profile for Vipin Kumar. The profile includes a header with the Microsoft Academic Search logo and a search bar. Below the header, there are sections for 'Co-authors (645)', 'Conferences (49)', 'Journals (130)', and 'Keywords (1101)'. The 'Co-authors' section lists names like George Karypis, Michael Steinbach, Pang-ning Tan, Ananth Y. Grama, and Anshul Gupta. The 'Conferences' section lists SC, KDD, ICCSA, SDM, and PPSC. The 'Journals' section lists JPDC, TKDE, TPDS, Cheminform, and DATAMINE. The 'Keywords' section lists Association Analysis, Association Rule, Data Mining, Experimental, Autoimmune Encephalomyelitis, Graph Partitioning, High Performance, Hypergraph, Partitioning, Indexation, Large Scale, Load Balance, Parallel Algorithm, Parallel Computer, Parallel Processing, Sparse Matrix, and Time Series. The main profile area shows Vipin Kumar's photo, name, affiliation (University of Minnesota), and statistics: Publications: 571, Citations: 15180. It also lists fields of interest: Distributed & Parallel Computing, Data Mining, Databases. A line graph shows the cumulative number of publications and citations from 1976 to 2012. Below the graph, there are several publications listed with their titles, authors, and journals.

ResearcherID (Thomson Reuters)

- **Benefits**
 - Import from Web of Science, etc.
 - Some useful metrics
 - BibTeX export

- **Cons**
 - No preprints!
 - Fewer cites than Google Scholar (partly due to mistakes)
 - Manual updating
 - No merge capability
 - Stupidly confused by upper/lowercase
 - Only includes researchers that have manually set up an account

- **How to Set Up**
 - www.researcherid.com

- **Not Recommended**
 - Too hard to make corrections

ResearchGate

- **Pros**
 - Social network for publications
 - Allows user to upload PDF versions
 - Recommends papers and keeps you updated on publications of colleagues, etc.

- **Cons**
 - Insists that I work in Albuquerque!
 - No export to BibTeX!
 - Does not link to DOI!
 - Makes up its own “impact” score

- **Getting Started**
 - www.researchgate.net

- **No Recommendation**
 - Might be useful for technical social networking
 - Can be overwhelming

The screenshot shows the ResearchGate profile of Katherine Yelick. At the top, there is a navigation bar with 'ResearchGate' and links for 'Topics', 'Publications', 'Projects', and 'more'. The user's profile header includes a photo, name 'Katherine Yelick', and credentials 'B.S., M.S., PhD' from the 'University of California, Berkeley - Department of Electrical Engineering...'. A green 'Follow' button is visible. Below the header, a summary bar shows '210 PUBLICATIONS', '4k Views', '1,280 Downloads', and '250 Citations'. The main content area is divided into sections: 'FEATURED PUBLICATIONS' with three entries (e.g., 'Conference Proceeding: Communication Avoiding and Overlapping for Numerical Linear Algebra'), 'TOP CO-AUTHORS' with a list of names and their metrics, '12 FOLLOWING' and '70 FOLLOWERS' sections with profile pictures, and 'TOPICS (10)' with tags like 'Programming Languages' and 'Computer Architecture'. A footer contains copyright information and links for 'About us', 'Contact us', 'Developers', 'News', 'Privacy', and 'Terms'.

Other Sites

- **ArXiv.org**
 - Highly recommended as preprint server
 - Many researchers follow certain topics
 - Quickly indexed by Google
 - Easy to post revisions
 - Can append final citation and comments

- **LinkedIn**
 - Manual input
 - Hard to maintain

- **Institutional Repositories**
 - Common in the UK
 - Work much like arXiv, but local

Abstract: Graphs are used to model interactions in a variety of contexts, and there is a growing need to quickly assess the structure of a graph. Some of the most useful graph metrics, especially those measuring social cohesion, are based on triangles. Despite the importance of these triadic measures, associated algorithms can be extremely expensive. We discuss the method of wedge sampling. This versatile technique allows for the fast and accurate approximation of all current variants of clustering coefficients and enables rapid uniform sampling of the triangles of a graph. Our methods come with provable and practical time-approximation tradeoffs for all computations. We provide extensive results that show our methods are orders of magnitude faster than the state-of-the-art, while providing nearly the accuracy of full enumeration. Our results will enable more wide-scale adoption of triadic measures for analysis of extremely large graphs, as demonstrated on several real-world examples.

Journal Article

E. C. Chi and T. G. Kolda, *On Tensors, Sparsity, and Nonnegative Factorizations*, SIAM Journal on Matrix Analysis and Applications 33(4):1272-1299, December 2012, [doi:10.1137/110859063](https://doi.org/10.1137/110859063). [PDF] [BibTeX] {[older version](#)}

Abstract: Tensors have found application in a variety of fields, ranging from chemometrics to signal processing and beyond. In this paper, we consider the problem of multilinear modeling of sparse count data. Our goal is to develop a descriptive tensor factorization model of such data, along with appropriate algorithms and theory. To do so, we propose that the random variation is best described via a Poisson distribution, which better describes the zeros observed in the data as compared to the typical assumption of a Gaussian distribution. Under a Poisson assumption, we fit a model to observed data using the negative log-likelihood score. We present a new algorithm for Poisson tensor factorization called CANDECOMP-PARAFAC alternating Poisson regression (CP-APR) that is based on a majorization-minimization approach. It can be shown that CP-APR is a generalization of the Lee-Seung multiplicative updates. We show how to prevent the algorithm from converging to non-KKT points and prove convergence of CP-APR under mild conditions. We also explain how to implement CP-APR for large-scale sparse tensors and present results on several data sets, both real and simulated.
