Process

Germination

- The success of germination is dependent on many factors such as soil, temperature, water and oxygen.
- Where does it land?
- Do not jump to process!

Starburst

- A region in space with a much higher than normal star formation.
- Do not jump to process!

Conceptual Thinking

- Don't let the details hold you down
- Anything is possible
- No pre-conceived biases
- Do not jump to process!

Insanity: Doing the same thing over and over again and expecting different results

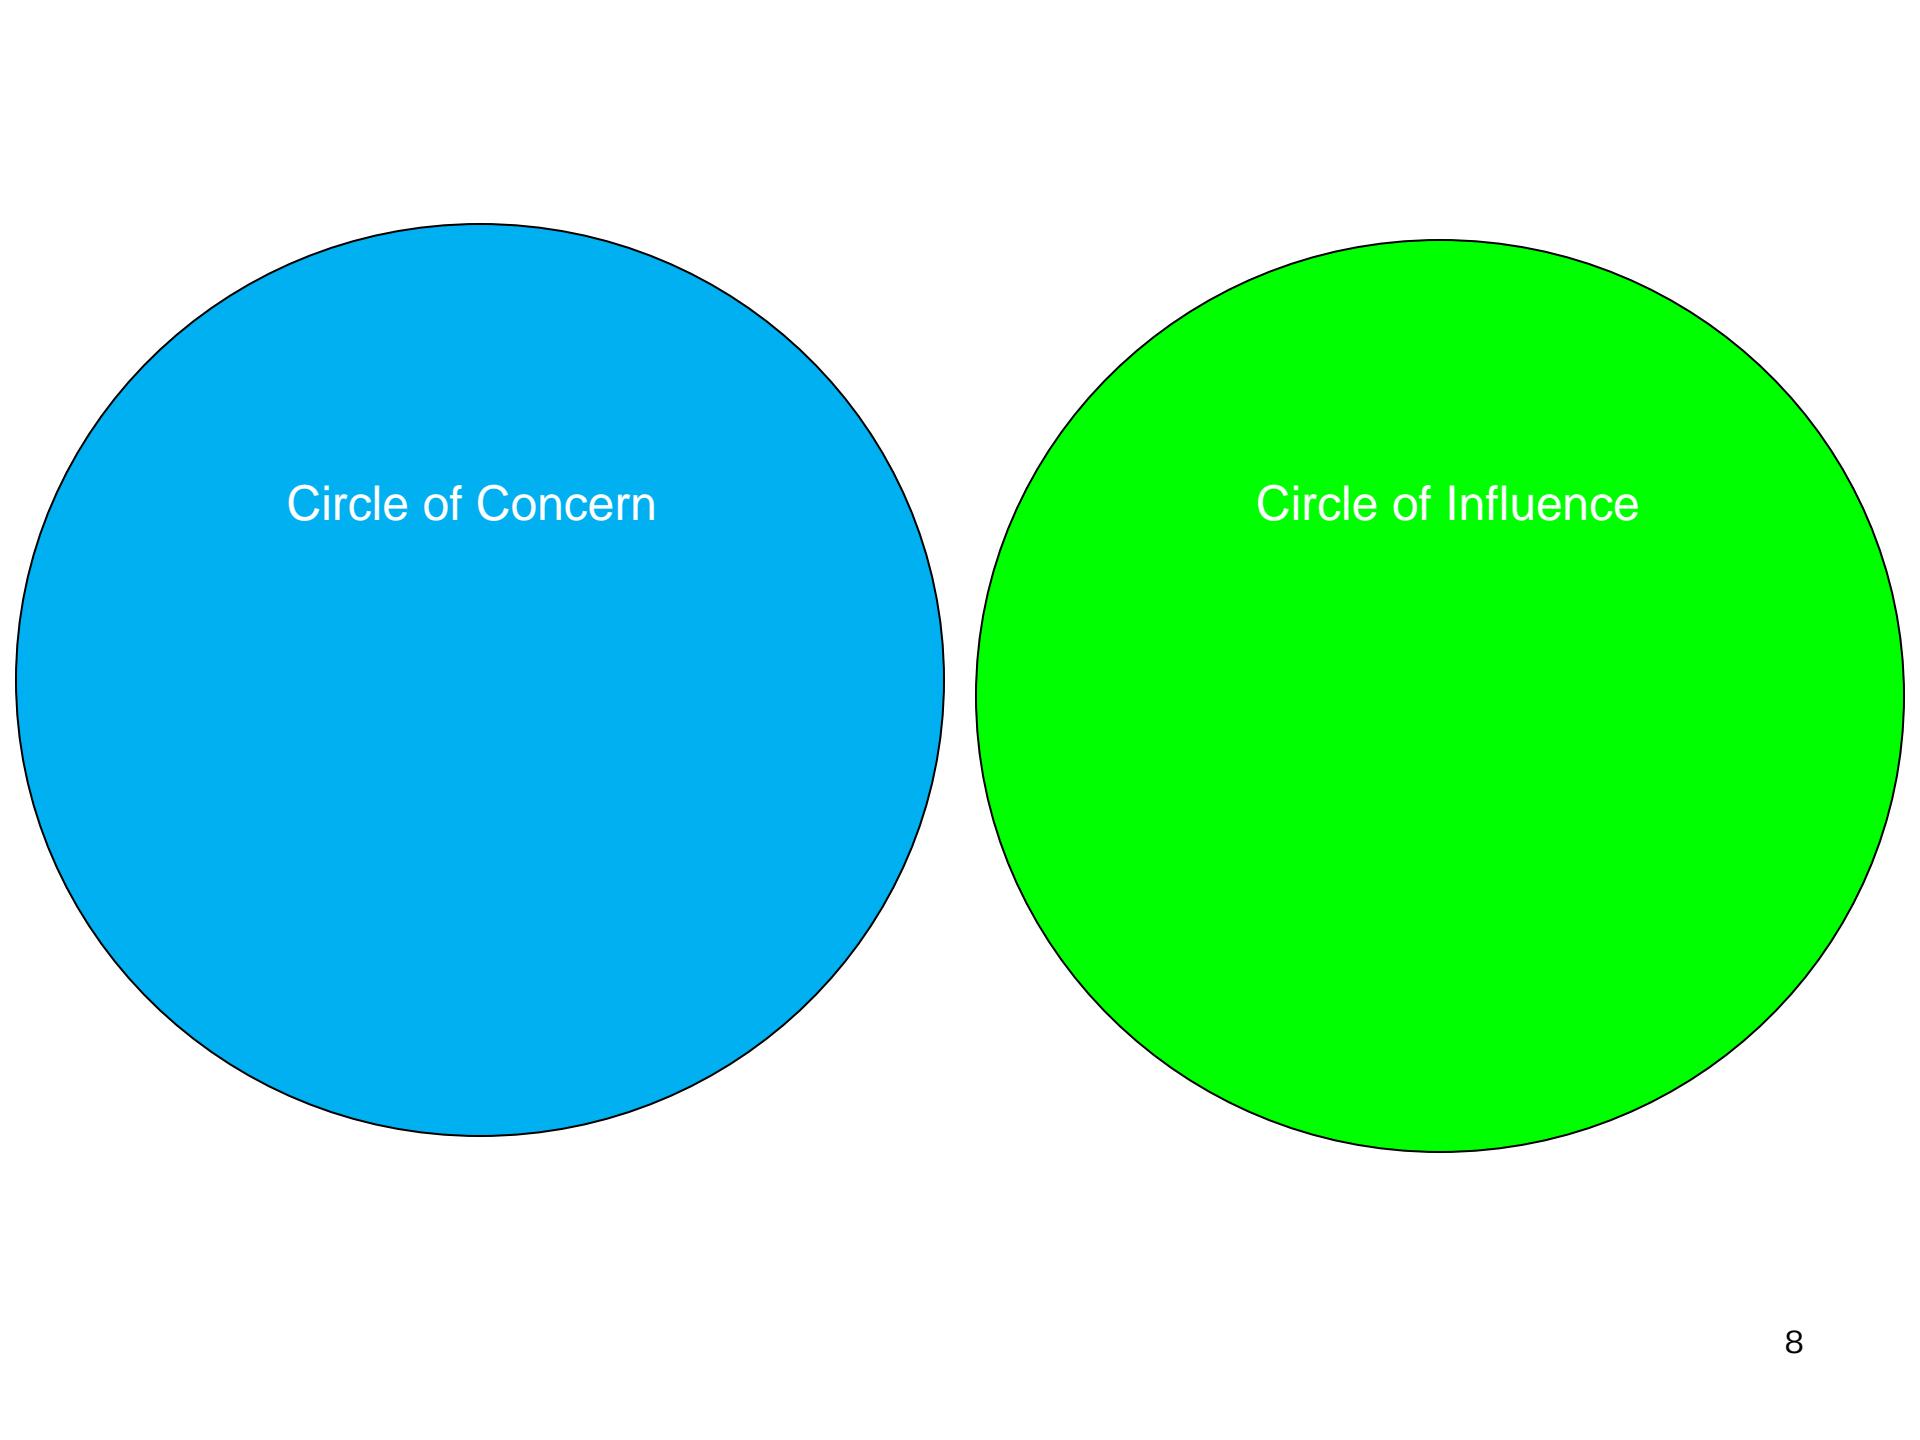

Awareness

- **Know how to influence others**
- **Don't assume your target audience understands the issues**
- **Build the bridge toward mutual interests**
- **Don't scare people into the program. Illustrate the potential issues and provide the supporting documentation so they can arrive at their own conclusions**
- **Do not jump to process!**

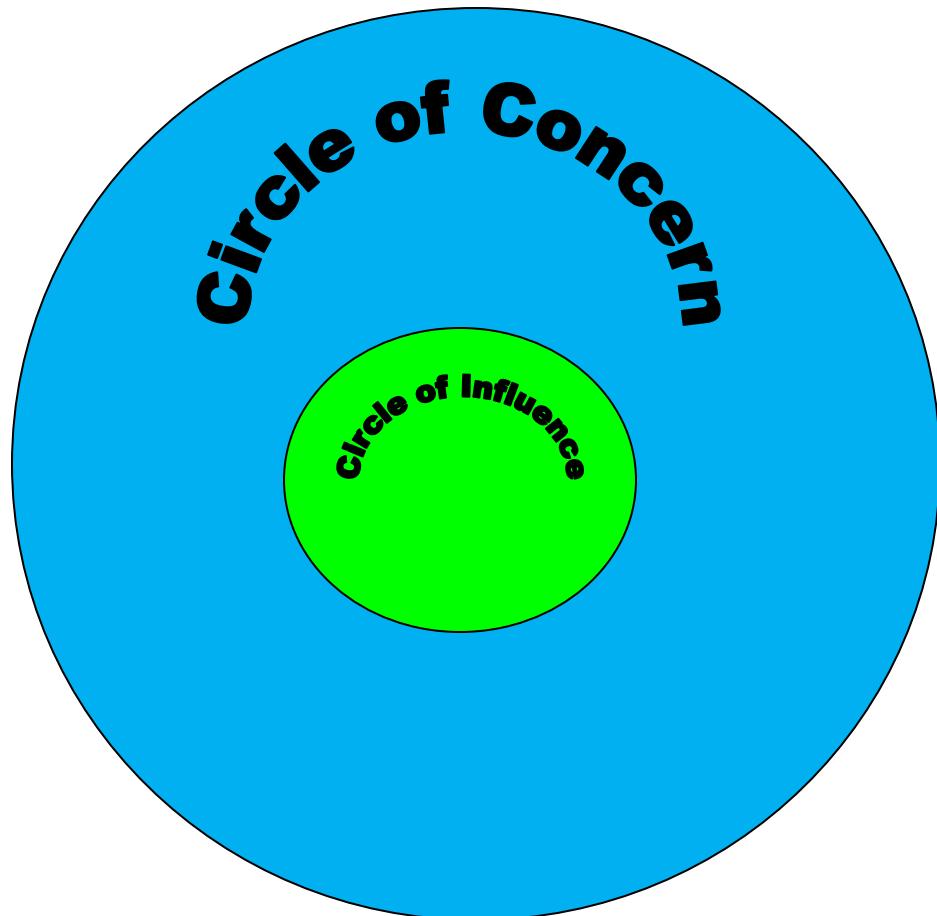

Problem Solving

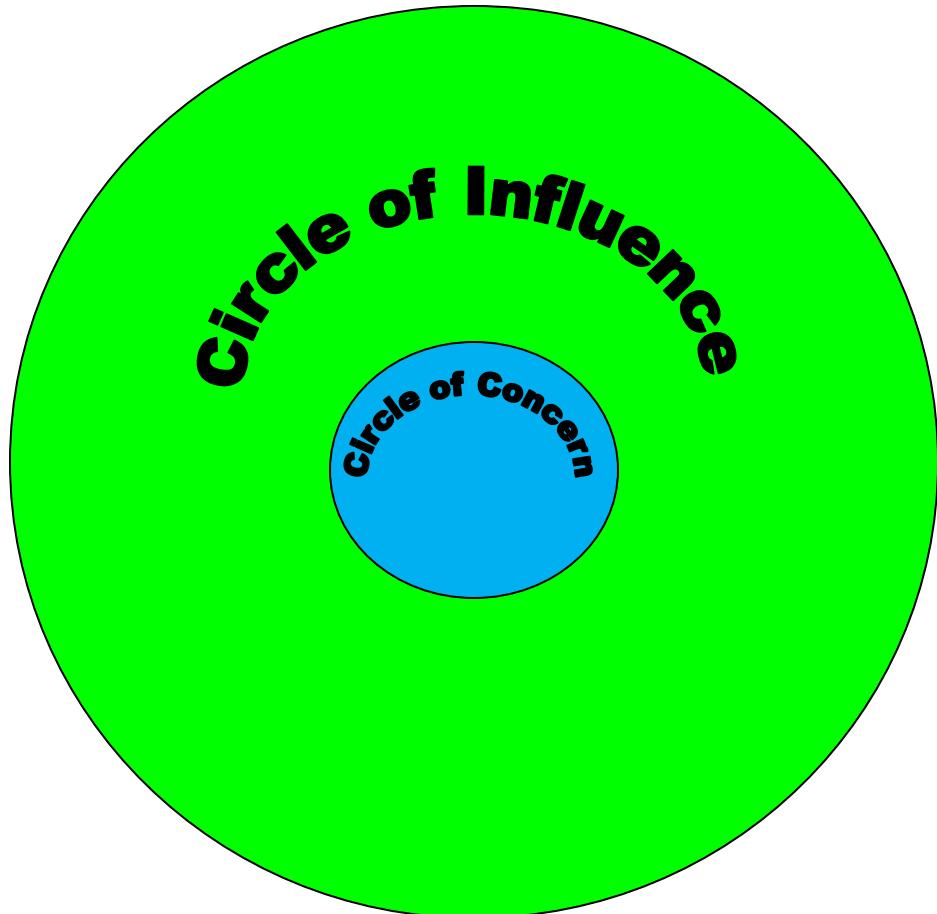

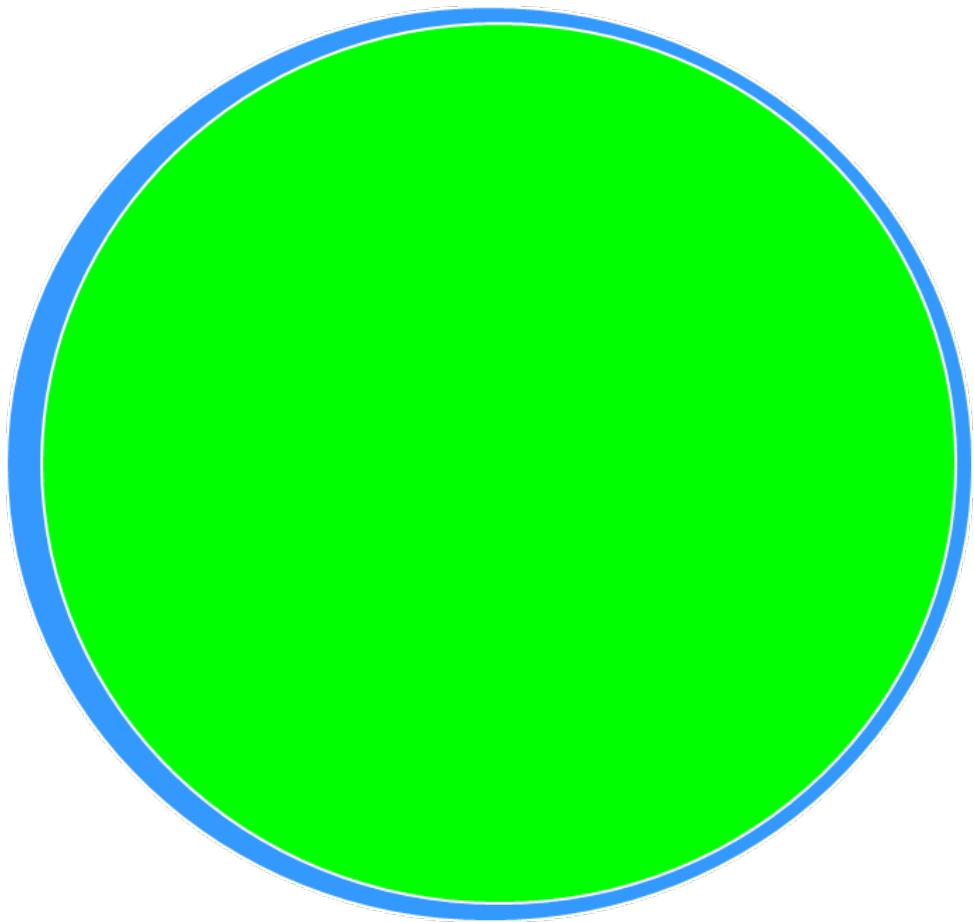

Circle of Concern

Circle of Influence

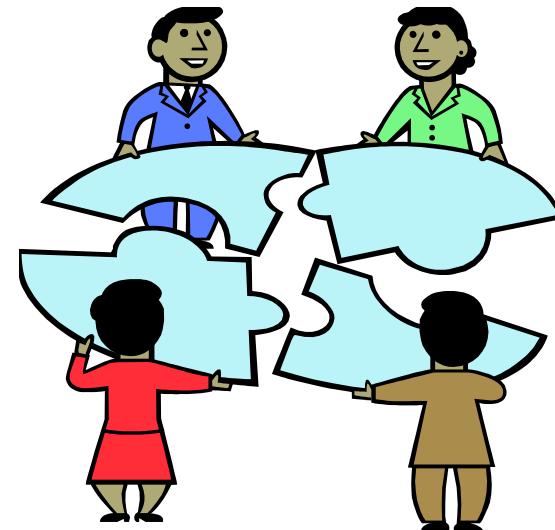

Action- This is Where the Building Begins

- **Gather input and socialize**
- **Allocate resources**
- **Leadership must support the program**
- **Define process**
- **Publish your plan**

Response

- **Brainstorming for new interventions**
- **Searching for what others with similar problems have done**
- **Choosing among the alternative interventions**
- **Outlining a response plan and identifying responsible parties**
- **Set short and long-term goals**
- **Carrying out the planned activities**
- **Consider positive and negative impacts and outcomes**

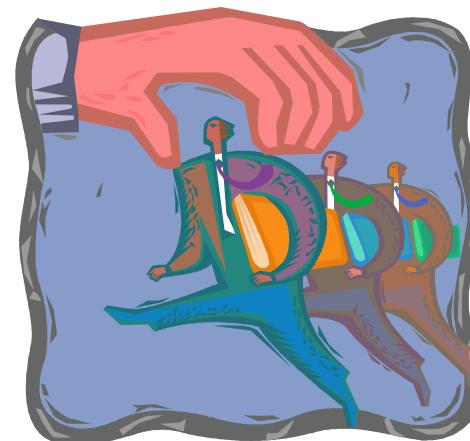

Evaluate Each and Every Position

- All positions must be evaluated for possible inclusion in the program
- Be prepared to include positions that don't directly deal with material
- At this stage, it is better to identify a position even though it may later be eliminated

Eliminate

- Begin looking for ways to eliminate your original pool by providing mitigating factors.
- Protect non-HRP workers from the intrusiveness of the program by ensuring they are not included.

Designate

- **Inform workers about the process used to determine positions**
- **Don't make it a mysterious process**
- **Work with Human Resources to clearly identify HRP certification requirements**
- **Work with your medical clinic to ensure monitoring requirements are not duplicated**

Process

- **Supervisor input**
- **Medical/Psychological input**
- **Reporting requirements**
- **Security reviews**
- **Drug/Alcohol testing**
- **Continuous monitoring**
- **Swift reaction to reliability concerns without prejudgment**

Process Development

- **Efficiency**
- **Cost**
- **Worker burden**
- **Applicability**
- **Unbiased**

Reputation

Publicity

- A strong reliability program will be able to demonstrate to others you had planned on the possibility of an insider threat and/or some measure of unreliability and had taken steps to mitigate the potential threat **IN ADVANCE**

Leadership

- The program must be embraced by senior leaders in the company
- If they fit the criteria for inclusion, leaders must participate. No exemptions can be allowed
- Leadership defines the “health” of the program and ultimately attitude

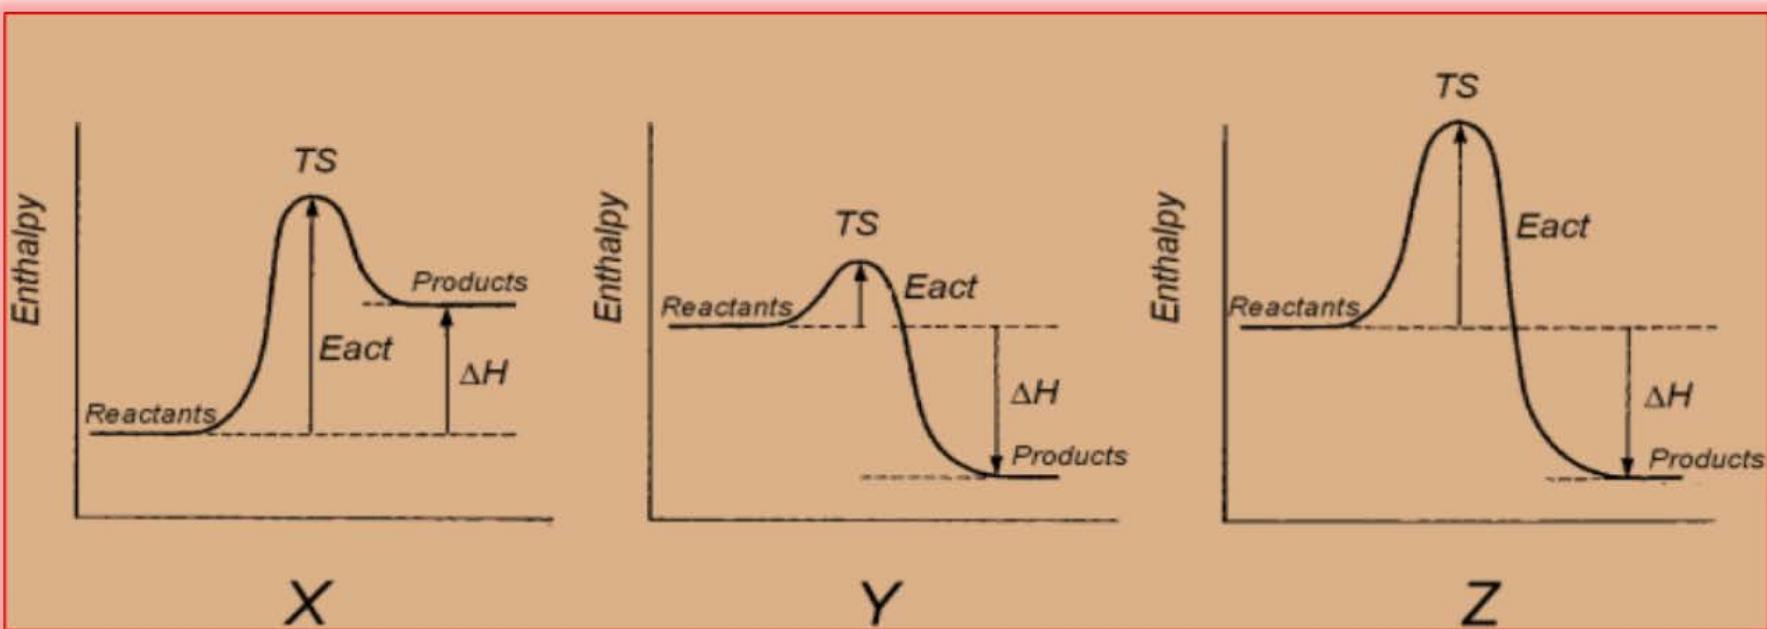

Audit

- **A healthy program mandates inspection from the outside**
- **A fresh set of eyes with a different perspective**
- **This activity will give credibility to your program and internalize oversight to your managers and participants**
- **Over time, your program will improve**

Realistic

Is It Worth It?

Entropy
