Title: Kinetic Modeling of Next-Generation High-Energy, High-Intensity  
Laser-Ion Accelerators

Author(s): Albright, Brian James  
Yin, Lin  
Stark, David James

Intended for: Highlight slides for Institutional Computing project

Issued: 2017-02-06

**PI: Brian Albright (XTD-PRI)**  
**Co-Is: Lin Yin (XCP-6), David Stark (XCP-6)**

## Project Highlights

15 December, 2016

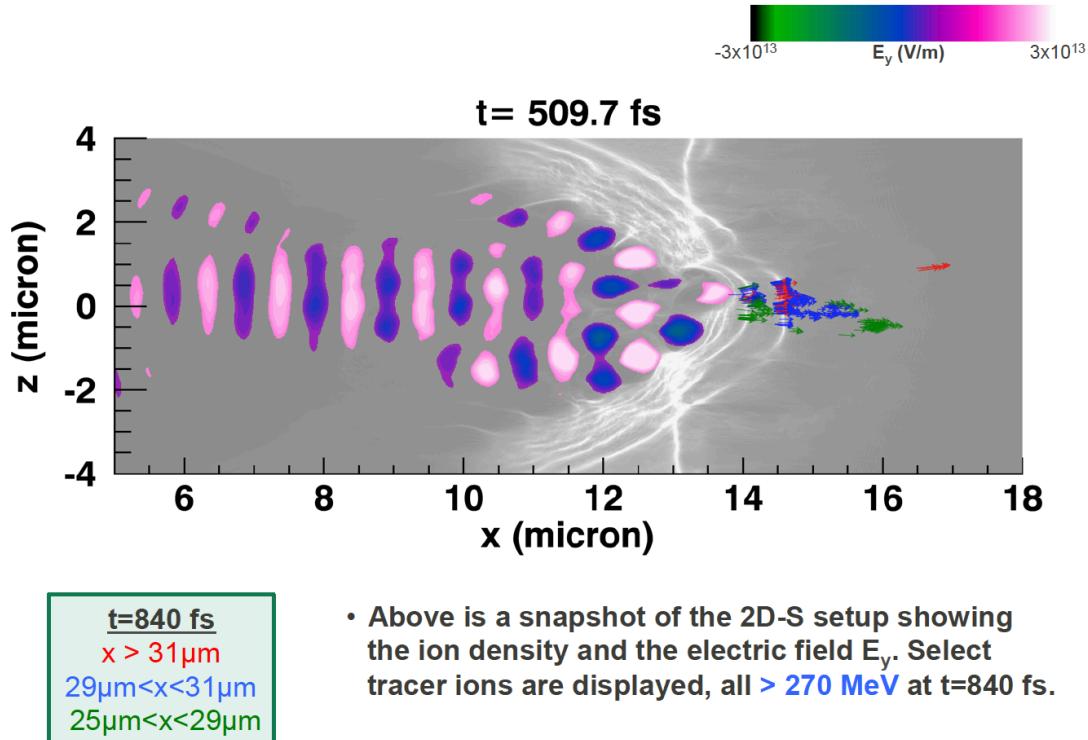

Operated by Los Alamos National Security, LLC for the U.S. Department of Energy's NNSA

# Institutional Computing enabled VPIC calculations that advanced significantly our understanding of laser-ion acceleration

- One of the long-standing problems in the community is the question of how we can model “next-generation” laser-ion acceleration in a computationally tractable way
  - 3D is heroic: how can we capture the physics faithfully in 2D simulations?
- A new particle tracking capability in the LANL VPIC kinetic plasma modeling code has enabled us to solve this long-standing problem

D. J. Stark, L. Yin, B. Albright, and F. Guo,  
“Effects of dimensionality on computer simulations of laser-ion acceleration in the transparency regime,” Phys. Plasmas (submitted)

- Above is a snapshot of the 2D-S setup showing the ion density and the electric field  $E_y$ . Select tracer ions are displayed, all  $> 270$  MeV at  $t=840$  fs.

*This work is helping to resolve a long-standing debate in the community*

# Though an interim award, this project has nevertheless led to several papers

- D. J. Stark, L. Yin, B. J. Albright, F. Guo, "Toward Extrapolating Two-Dimensional High-intensity Laser-Plasma Ion Acceleration Particle-in-Cell Simulations to Three Dimensions," 58th Annual Meeting of the APS Division of Plasma Physics, October 31–November 4, San Jose, California (2016).
- L. Yin, D. J. Stark, B. J. Albright, "Effects of dimensionality on computer simulations of laser-ion acceleration: When are three-dimensional simulations needed?" 58th Annual Meeting of the APS Division of Plasma Physics, October 31–November 4, San Jose, California (2016).
- B. J. Albright, L. Yin, A. Favalli, "Neutron Generation from Laser-Accelerated Ion Beams: Use of Alternative Deuteron-Rich Targets for Improved Neutron Yield and Control of Neutron Spectra", 58<sup>th</sup> Annual Meeting of the APS Division of Plasma Physics, October 31–November 4, San Jose, California (2016).
- B. J. Albright, L. Yin, and A. Favalli, "Neutron Generation from Laser-Accelerated Ion Beams: Use of Alternative Deuteron-Rich Targets for Improved Neutron Yield and Control of Neutron Spectra", submitted to Physical Review Accelerators and Beams (2016).
- An additional journal article (to be submitted to Physics of Plasmas) is in preparation on these results.
